for the proper performance of the functions of the agency, including whether the information will have practical utility:

- Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: DOL–ETA.

Title of Collection: Distribution of Characteristics of the Insured Unemployed.

OMB Control Number: 1205–0009.

Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Respondents: 53.

Total Estimated Number of Responses: 636.

Total Estimated Annual Time Burden: 212 hours.

Total Estimated Annual Other Costs Burden: $0.

Dated: November 2, 2015.

Michel Smyth,
Departmental Clearance Officer.

SUPPLEMENTARY INFORMATION:
The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95–541), as amended by the Antarctic Science, Tourism and Conservation Act of 1996, has developed regulations for the establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas requiring special protection. The regulations establish such a permit system to designate Antarctic Specially Protected Areas.

Description of Permit Modification Requested: The Foundation issued a permit (ACA 2015–015) to Joseph A. Covi on December 30, 2014. The issued permit allows the applicant to collect sediment samples in ASPA 132 Potter Peninsula, ASPA 150 Ardley Island, and ASPA 171 Narebski Point, Barton Peninsula, all on King George Island, in order to study the viability and biodiversity of dormant zooplankton, and the presence and origin of anthropogenic chemicals in lakes and ephemeral ponds.

Now the applicant proposes a modification to his permit to add ASPA 125 Fildes Peninsula to the permit, as well as to change the sampling regime and number of samples taken. 1 to 2 lakes would be sampled in each ASPA, with 6 sediment grab samples from each lake. Up to 2 ephemeral ponds per ASPA would be sampled, with 3 samples per pond, provided sampling is possible without disturbing the surrounding sediment.

Location: ASPA 125: Fildes Peninsula, King George Island, South Shetland Islands.

Dates: January 6–March 1, 2016.

Nadene G. Kennedy,
Polar Coordination Specialist, Division of Polar Programs.
