

majority of prostate cancer cells is Prostate Specific Antigen (PSA).

The present invention relates to isolated peptides comprising immunogenic peptides derived from PSA. These immunogenic peptides are considered agonist epitopes of the wild-type PSA-3 cytotoxic T lymphocyte (CTL) epitope: an agonist epitope is modified from the wild type epitope and shows greater immune stimulating characteristics. This invention claims the physical composition and use of the PSA-3 agonist epitopes, including peptide, nucleic acid, pharmaceutical composition, and method of treatment. The PSA-3 agonist epitopes would have application in a number of traditional and non-traditional vaccine delivery systems for the treatment of cancer.

Some vaccine delivery fields of use for the PSA-3 epitope have been exclusively licensed. However, a number of fields are available for other traditional and non-traditional vaccine delivery systems. This invention has been published in Schlom, *et al.*, "Identification and Characterization of a Human Agonist Cytotoxic T-Lymphocyte Epitope of Human Prostate-specific Antigen." *Clinical Cancer Research*, Vol. 8, 41-53, January 2002.

In addition to licensing, the technology is available for further development through collaborative research with the inventors via a Cooperative Research and Development Agreement (CRADA).
