

the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), and the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216).

This permit amendment authorizes a study to assess protein turnover rates in eight harbor seals authorized to be held at the ASLC. The study involves the administration of the stable isotope ¹⁵[N] glycine, a non-essential amino acid involved in protein synthesis, to assess protein turnover in the seals through analysis of blood samples. Sodium bromide (NaBr) would also be administered and post dosage blood samples would occur concurrently for the substances. NaBr is a nonradioactive substance and is used to measure the extracellular phase of body water. This study will be part of a long term study to investigate the effects of high and low lipid diets on the growth, development, maturity, and health of harbor seals in captivity. This amendment is authorized until the expiration of permit, November 30, 2008.
