### Method, Apparatus and System for Assessing Conditions (Local Positioning System)

*Larry Alan Lee et al.*

U.S. Patent Application No. 10/815,111 filed March 31, 2004

CDC Reference No. I-017-03/0—Research Tool

Workers in many outdoor occupations move about frequently during a typical day of work. Certain workers, such as agricultural and construction workers are particularly mobile. The National Institute for Occupational Safety and Health (NIOSH) designed and developed a prototype exposure monitoring system which combines geographical location with up to four real-time sensors and outputs the information to a user-friendly interface. By linking worker location throughout the workday to exposure levels from real-time monitors, Local Positioning System (LPS) units with software processing of data identify and document where to focus exposure analysis and control efforts. Post-processing of LPS data enables researchers, regulatory inspectors, and industry safety and health personnel to map exposure intensity and location, reveal hot spots to identify sources, and provide exposure intensity distributions.

### Method and Apparatus for Cough Sound Analysis

*William Travis Goldsmith et al.*

U.S. Patent No. 6,436,057, Canadian Patent Application No. 2,269,992 filed April 23, 1999

CDC Reference No. I-020-99/0—Research Tool

A fast, simple, and reliable method and apparatus for recording cough sounds for diagnosing pulmonary disorders and diseases. This method uses signal analysis techniques to extract quantitative information from recorded cough sound pressure waves. The generated data can be used to diagnose pulmonary disorders and diseases as well as track the effectiveness of treatment regimes over time. The method can also be used to quickly and reliably screen individuals at risk of pulmonary disorders and diseases. A system according to one embodiment includes a mouthpiece connected to the proximal end of a tube. The distal end of the tube is connected to a flexible tube. A microphone is attached to the tube between the distal and proximal ends thereof for recording sound pressure waves. A calculated
