Proposed Project: Human Behavior in Fire Study—New—National Center for Injury Prevention and Control (NCIPC), Centers for Disease Control and Prevention (CDC).

Background and Brief Description: This project will characterize the behaviors of individuals who were involved in a residential fire, and determine which behaviors are associated with injuries sustained in the fire incident. Behaviors related to fire escape planning and practice, smoke alarm installation and maintenance, physical and visual access to escape routes, etc., will be studied. In the United States each year, there are approximately 400,000 residential fires, with 14,000 non-fatal and 3,000 fatal

civilian injuries. In line with Healthy People 2010 objectives, NCIPC works to reduce and eliminate non-fatal and fatal injuries from residential fires. In order to develop effective fire-related injury prevention programs, a better understanding of human behavior in fires is needed.

The design of this study will be a matched-pair, case-control study. Cases will be defined as individuals who were injured in a residential fire and controls will be individuals who were involved in a residential fire, but were not injured. Fire incidents involving a fatality will be excluded from this study. Local fire departments throughout the United States will submit fire incident reports to study personnel, who will select incidents based on geographical location. Further screening for eligibility will be done using a brief telephone interview. For those selected, interviewers will conduct in-depth, computer-assisted face-to-face interviews with participants. The sequence of events surrounding the fire and the behaviors of interviewees will be ascertained using the Behavioral Sequence Interview Technique. In addition, information on the nature of injuries sustained; characteristics of the fire and home structure; other occupants present; previous fire experiences; safety training; and demographics on the persons interviewed will be collected. The only cost to the respondents is the time involved to complete the screening and/or face-to-face interviews.

Estimate of Annualized Burden Table:

Respondents	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Adults—Screened	1,250	1	15/60	313
Adults—Cases and Controls	1,000	1	1	1,000
Total				1,313

Dated: March 21, 2005.
