Background and Purpose

In order to facilitate safe navigation and to prevent disasters, collisions, and wrecks of vessels, the Coast Guard may establish, maintain, and operate aids to navigation required to serve the needs of the Armed Forces or of the commerce of the United States (14 U.S.C. 81). It is through its Waterways Analysis and Management System (WAMS) process, that the Coast Guard manages aids to navigation in navigable waters of the U.S. WAMS studies, therefore, are intended to ensure that existing aids to navigation systems support safe marine navigation and the effective and efficient flow of waterborne commerce. A key aspect of a WAMS study is the consideration of the needs and input of waterway users (such as commercial interests, pilots, port authorities, military commands and other Federal agencies, State and local agencies, recreational boating organizations, and other interested groups) and non-user sources (such as waterfront facilities, homeowners or community associations, and political groups). Such valued input to these important studies is highly encouraged and should reflect
