

(EFPs) can be submitted by any of the following methods:

- Email: [ID032805A@noaa.gov](mailto:ID032805A@noaa.gov).

Include in the subject line the following identifier: I.D.032805A.

- Mail: Heather Stirratt, NMFS Highly Migratory Species Management Division, 1315 East-West Highway, Silver Spring, MD 20910.

- Fax: (301) 713-1917.

**FOR FURTHER INFORMATION CONTACT:**

Heather Stirratt at (301) 713-2347.

**SUPPLEMENTARY INFORMATION:** EFPs are requested and issued under the authority of the Magnuson-Stevens Act (16 U.S.C. 1801 *et seq.*) and/or the Atlantic Tunas Convention Act (16 U.S.C. 971 *et seq.*). Regulations at 50 CFR 600.745 and 635.32 govern scientific research activity, exempted fishing, and exempted educational activity with respect to Atlantic HMS.

Six operators of permitted Atlantic pelagic longline vessels have requested exemptions from certain regulations applicable to the harvest and landing of HMS in order to conduct bycatch reduction research in the following regions of the Atlantic Ocean: North of Cape Hatteras, South of Cape Hatteras, and Gulf of Mexico (GOM). Specifically, the vessels propose to test gear modifications and/or various fishing techniques to avoid incidentally-caught white marlin, blue marlin, bluefin tuna, and sea turtles, while allowing for the targeted catches of allowed species.

To conclusively demonstrate the effectiveness of gear modifications, in the shortest timeframe, it is necessary to test bycatch reduction measures in those areas where pelagic longlines are most likely to encounter the bycatch species of concern (i.e., juvenile HMS). As such, it is necessary to conduct comparison experiments both inside and outside of existing closed areas. Restricted access within existing closed areas has been proposed by the applicants as terms and conditions of the proposed research in order to minimize or eliminate the potential for gear and/or fishing grounds conflicts. Within the GOM region, two pelagic longline vessels propose to conduct 100 compensated bycatch reduction fishing sets (approximately 750 hooks/set) during a limited time period (late April through September). Within the North of Cape Hatteras region, two pelagic longline vessels propose to conduct 50 compensated bycatch reduction fishing sets (approximately 680 hooks/set) during a limited time period (June through August). Within the South of Cape Hatteras region, two pelagic longline vessels propose to conduct 50 compensated bycatch reduction fishing

sets (approximately 556 hooks/set) during a limited time period (late April through June).

This research may benefit all interested parties by providing fishery managers with additional gear modifications and/or fishing techniques that reduce or avoid incidental capture/bycatch mortality of HMS in the research areas as proposed above.

The regulations that would prohibit the proposed activities include requirements for size limits (50 CFR 635.20), commercial retention limits for sharks and swordfish (50 CFR 635.24), and definitions as they apply to closed areas (50 CFR 635.2).

NMFS invites comments from interested parties on potential concerns should these EFPs be issued. Copies of the EA are now available for review and comment (see **ADDRESSES**).

## DEPARTMENT OF COMMERCE

### National Oceanic and Atmospheric Administration

[I.D. 033005A]

#### Atlantic Coastal Fisheries Cooperative Management Act Provisions; Application for Exempted Fishing Permits

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Notice; request for comments.

**SUMMARY:** The Director, State, Federal and Constituent Programs Office, Northeast Region, NMFS (Office Director) has made a preliminary determination that the subject Exempted Fishing Permit (EFP) application contains all the required information and warrants further consideration. The Office Director has also made a preliminary determination that the activities authorized under the EFPs would be consistent with the goals and objectives of Federal management of the American lobster resource. However, further review and consultation may be necessary before a final determination is made to issue EFPs. Therefore, NMFS announces that the Office Director proposes to issue EFPs that would allow

a maximum of seven vessels to conduct fishing operations involving the use of one juvenile lobster collector trap per vessel that are otherwise restricted by the regulations governing the American lobster fisheries of the Northeastern United States.

The EFP involves the non-destructive collection of size frequency and population data on legal and sublegal lobsters as part of an ongoing research project to monitor the offshore lobster fishery in Lobster Management Area 3. It would not involve the authorization of any additional trap gear in the area. A maximum of seven participating commercial fishing vessels will collect detailed abundance and size frequency data on the composition of lobsters in four general offshore study areas in a collaborative effort with the Atlantic Offshore Lobstermen's Association (AOLA). This EFP requests that each participating commercial fishing vessel utilize one modified juvenile lobster collector trap to collect population data. The lobster trap modifications are to the escape vents, and trap entrance head, not to the trap's size or configuration. Therefore, this modified trap would impact its environment no differently than the regular lobster trap it replaces and will add no additional traps to the area. After data is collected on lobsters in the trap, all sub-legal and berried female lobsters will be immediately returned to the sea. The EFP waives the American lobster escape vent requirement for a maximum of one trap per vessel for a maximum of seven vessels in the program. Therefore, this document invites comments on the issuance of EFPs to allow a maximum of seven commercial fishing vessels utilize a maximum of seven modified lobster traps and to collect statistical data using modified lobster trap gear.

**DATES:** Written comments on this lobster EFP notification for offshore lobster monitoring and data collection must be received on or before April 19, 2005.

**ADDRESSES:** Written comments should be sent to Patricia A. Kurkul, Regional Administrator, NMFS, Northeast Regional Office, 1 Blackburn Drive, Gloucester, MA 01930-2298. Mark the outside of the envelope "Comments - Lobster EFP Proposal". Comments also may be sent via fax to 978-281-9117. Or, comments may be submitted by e-mail to [Lob0205@noaa.gov](mailto:Lob0205@noaa.gov). Include in the subject line the following document identifier: "Comments - Lobster EFP Proposal".

**FOR FURTHER INFORMATION CONTACT:** Bob Ross, Fishery Management Specialist, 978-281-9234, fax 978-281-9117.

**SUPPLEMENTARY INFORMATION:**

## Background

The regulations that govern exempted fishing, at 50 CFR 600.745(b) and 697.22 allow the Regional Administrator to authorize for limited testing, public display, data collection, exploration, health and safety, environmental clean-up, and/or hazardous removal purposes, and the targeting or incidental harvest of managed species that would otherwise be prohibited. An EFP to authorize such activity may be issued, provided there is adequate opportunity for the public to comment on the EFP application, the conservation goals and objectives of Federal management of the American lobster resource are not compromised, and issuance of the EFP is beneficial to the management of the species.

The American lobster fishery is the most valuable fishery in the northeastern United States. In 2003, approximately 72 million pounds (26,873 metric tons) of American lobster were landed with an ex-vessel value of approximately \$286 million. American lobster experience very high fishing mortality rates and are overfished throughout their range, from Canada to Cape Hatteras. Although harvest and population abundance are near record levels due to high recent recruitment and favorable environmental conditions, there is significant risk of a sharp drop in abundance, and such a decline would have serious implications. Operating under the Atlantic States Marine Fisheries Commission's interstate management process, American lobster are managed in state waters under Amendment 3 to the American Lobster Interstate Fishery Management Plan (Amendment 3). In Federal waters of the Exclusive Economic Zone (EEZ), lobster is managed under Federal regulations at 50 CFR part 697. Amendment 3, and compatible Federal regulations established a framework for area management, which includes industry participation in the development of a management program that suits the needs of each lobster management area while meeting targets established in the Interstate Fisheries Management Program. The industry, through area management teams, with the support of state agencies, have played a vital role in advancing the area management program.

To facilitate the development of effective management tools, extensive monitoring and detailed abundance and size frequency data on the composition of lobsters throughout the range of the resource are necessary. This proposed EFP will continue a project involved in extensive monitoring and detailed population information of American

lobster in four offshore study areas using modified lobster trap gear that would otherwise be prohibited.

## Proposed EFP

The proposed EFP is a continuation of a project begun in 2003, and is submitted by the AOLA and seven commercial lobster fishing vessels that are also members of the AOLA. The EFP proposes to collect statistical and scientific information as part of a project designed to monitor the offshore American lobster fishery to collect data that will assist the development of management practices appropriate to the fishery.

Each of seven commercial fishing vessels involved in this monitoring and data collection program would collect detailed abundance and size frequency data on the composition of all lobsters collected from one modified juvenile lobster trap in a string of approximately 40 lobster traps, including data on sub-legal, and egg bearing females in addition to legal lobsters. This EFP would not involve the authorization of any additional lobster trap gear in the area. Vessels would collect data from each of four general study areas: The Mid-Atlantic - Chesapeake 50 Fathom Edge; the Southern - Hudson Canyon Area; the Middle - Veatch Canyon Area; and the Northern - Georges Bank and Gulf of Maine Area. The participating vessels may retain on deck sub-legal lobsters, and egg bearing female lobsters, in addition to legal lobsters, for the purpose of collecting the required abundance and size frequency data specified by this project. Data collected would include size, sex, shell disease index, and the total number of legals, sub-legals, berried females, and v-notched females. All sub-legals, berried females, and v-notched females would be returned to the sea as quickly as possible after data collection. Pursuant to 50 CFR 600.745(3)(v), the Regional Administrator may attach terms and conditions to the EFP consistent with the purpose of the exempted fishing.

This EFP requests the inclusion of a maximum of one modified lobster trap per vessel, designated as a juvenile lobster collector trap, in the string of approximately 40 traps. This modified lobster trap would have a smaller entrance head, no escape vents and would be made of a smaller mesh than the traditional offshore trap to catch and retain a high percentage of juvenile lobsters in the 30–65 mm carapace length range. The smaller entrance head would exclude large lobsters from this trap and decrease the probability of cannibalism within the trap. The modifications to the trap are to the

escape vents, and trap entrance head, not to the trap's size or configuration, therefore this modified trap would impact its environment no differently than the regular lobster trap it replaces. This EFP will add no additional traps to the areas. Due to modifications to the escape vent, the EFP proposed to waive the American lobster escape vent requirement specified at 50 CFR 697.21(c) for a maximum of one trap per vessel for a maximum of seven vessels in the program. With the exception of the one modified juvenile lobster collector trap, all traps fished by a maximum of seven participating vessels would comply with all applicable lobster regulations specified at 50 CFR part 697.

All sample collections would be conducted by seven federally permitted commercial fishing vessels, during the course of regular commercial fishing operations. There would not be observers or researchers onboard the participating vessels.

This project, including the lobster handling protocols, was initially developed in consultation with NOAA Fisheries and University of New Hampshire scientists. To the greatest extent practicable, these handling protocols are designed to avoid unnecessary adverse environmental impact on lobsters involved in this project, while achieving the data collection objectives of this project.
