NUCLEAR REGULATORY COMMISSION

[Docket No. 50-213]

Environmental Assessment and Finding of No Significant Impact Related to Exemption of Material for Proposed Disposal Procedures for the Connecticut Yankee Atomic Power Company License DPR-061, East Hampton, CT

AGENCY: Nuclear Regulatory Commission.

ACTION: Environmental Assessment and Finding of No Significant Impact.

FOR FURTHER INFORMATION CONTACT: Theodore Smith, Division of Waste Management and Environmental Protection, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Mail Stop T7E18, Washington, DC 20555-00001. Telephone: (301) 415-6721; e-mail *ths1@nrc.gov*.

SUPPLEMENTARY INFORMATION:

I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) staff is considering a September 16, 2004, request by the Connecticut Yankee Atomic Power Company (CYAPCO or Licensee), License DPR-61, to dispose of demolition debris from decommissioning the Haddam Neck Plant (HNP) in East Hampton, Connecticut. The request was submitted pursuant to Section 20.2002 of Title 10 of the Code of Federal Regulations (10 CFR 20.2002), "Method of Obtaining Approval of Proposed Disposal Procedures." The licensee proposes to demonstrate that the material is acceptable for burial at a Subtitle C, Resource Conservation and Recovery Act (RCRA) hazardous waste disposal facility in accordance with 10 CFR 20.2002. The RCRA facility is regulated by the State of Idaho Department of Environmental Quality, and any disposal must comply with State requirements. This action, if approved, would also exempt the slightly contaminated material from further Atomic Energy Act (AEA) and NRC licensing requirements. The NRC has prepared an Environmental Assessment (EA) in support of this proposed action

in accordance with the requirements of 10 CFR Part 51. Based on the EA, the NRC has determined that a Finding of No Significant Impact (FONSI) is appropriate.

II. Environmental Assessment

Background

The waste material (the demolition debris) intended for disposal includes flooring materials, concrete, rebar, roofing materials, structural steel, soils associated with digging up foundations, and concrete and/or pavement or other similar solid materials. Soils remediated for the purpose of meeting the final status survey requirements of the HNP License Termination Plan (LTP) (i.e., exceed the Derived Concentration Guideline Levels [DCGL] in the LTP) are not included in this action. CYAPCO intends to scabble off surface concrete where contamination or activation levels are high, and to dispose of this material at radioactive waste disposal facilities. The demolition debris will originate from the destruction and removal of structures and paved surfaces at the HNP site, after the structure/surface has been decontaminated to remove areas that are highly contaminated. The underlying soil will be surveyed in accordance with CYAPCO's LTP.

The physical form of this demolition debris will be that of bulk material of various sizes ranging from the size of sand grains up to occasional monoliths with a volume of several cubic feet. The material will be dry solid waste containing no absorbents or chelating agents. The mass of demolition debris originating from the decommissioning of the HNP is estimated to be approximately 45,000 metric tons (50,000 tons). After compaction, the estimated volume of material to be disposed of is approximately 30,500 cubic meters (40,000 cubic yards).

The licensee has demonstrated by calculation that the potential dose consequence is less than 30 microsieverts per year ($\mu\text{Sv/y}$) (3.0 millirem per year [mrem/y]), as a result of the proposed burial of demolition debris in a RCRA facility.

Proposed Action

The proposed action would approve the removal of approximately 45,000 metric tons (50,000 tons) of demolition debris from the HNP, transportation of the debris, and disposition of the debris at the U.S. Ecology facility in Grand View, Idaho. The proposed action also would exempt the low-contamination material from further Atomic Energy Act and NRC licensing requirements. The

licensee has conservatively assumed a radionuclide inventory for the demolition debris and calculated the potential dose as less than 30 microsieverts per year ($\mu\text{Sv/y}$) (3.0 millirem per year [mrem/y]), if all the material were disposed of in such a facility. The proposed action is in accordance with the licensee's application dated September 16, 2004, and supplements dated December 17, 2004, March 1, 2005, and March 29, 2005, requesting approval.

Need for Proposed Action

The licensee needs to dispose of 45,000 metric tons (50,000 tons) of demolition debris since the HNP site is currently undergoing licensed decontamination and decommissioning in accordance with the LTP. Characterization and conservative modeling of the material to be included as demolition debris have been used to develop overall averages for radionuclide concentrations. These averages are listed below in Table 1. The licensee proposes to dispose of 45,000 metric tons (50,000 tons) of demolition debris at U.S. Ecology, Idaho, which is a Subtitle C, RCRA hazardous waste disposal facility. This proposed action, would also require NRC to exempt the slightly contaminated material authorized for disposal from further AEA and NRC licensing requirements.
