EFFECTIVE DATE: April 15, 2005.

FOR FURTHER INFORMATION CONTACT: Bill Rice, Office of Administration, Department of Housing and Urban Development, Room 2170, 451 Seventh Street, SW., Washington, DC 20410-3000, (202) 708-3452. SUPPLEMENTARY INFORMATION: In November 1993, HUD implemented a reorganization of its field structure that, among other things, changed the designation of HUD's ten Regional Offices from designation by Roman numeral to designation by geographic area, such as New England, New York/New Jersey, Mid-Atlantic, Southeast, etc.

This notice published in today's **Federal Register** advises the public that HUD is returning to Roman numeral designation for its ten Regional Offices. This notice also advises that each HUD "Area Office" that is the assigned location for a Regional Director will be renamed "Regional Office." Any office that is the assigned location of a Field Office Director, and also referred to as an Area Office, will now be referred to as a Field Office. HUD's Community Service Centers will also be referred to as Field Offices. There will no longer be offices referred to as Area Offices or Community Service Centers. HUD has not made changes to the functions or responsibilities of the offices that are the subject of this notice.

The appendix that accompanies this notice reflects the new titles for HUD's Regional Offices.

Dated: May 9, 2005.

SUPPLEMENTARY INFORMATION:

Background

The Rio Tinto Mine (Mine) was first worked by the Anaconda Copper Mining Company (Anaconda) using underground mining techniques and a flotation mill from 1932 to 1947. During this period, Anaconda established

tailings ponds, and deposited tailings and waste rock in the Mill Creek Watershed, and realigned Mill Creek. In 1966, G.M. Wallace and Company and Cleveland Cliffs Iron Company (Cleveland Cliffs), formerly Cliffs Copper Corporation, performed acid leaching activities and constructed an additional pond in the Mill Creek Watershed. In 1967, Cleveland Cliffs took ownership and operation in its entirety. In 1972, Teck Cominco American Incorporated (Cominco American), formerly Cominco America, Inc. became legal owner of the Mine. From 1972 to 1975, in order to remove water accumulation in underground mining areas, a 6700-foot deep well and a waste water treatment plant were installed. The treatment plant discharged waste water to Mill Creek and produced sludge. A sludge pond was developed to dispose of this sludge. Also, drainage ditches were created in the tailings. In 1975, Cleveland Cliffs terminated operations. Also, in 1975, Cominco American and E.I. du Pont de Nemours and Company (DuPont) began to drill exploratory holes. From 1986 to 1987, Rio Tinto Copper, Inc. owned and operated an in-situ acid leaching operation.

Releases of hazardous substances from the Mine began as early as 1932, and continue today. Several sources at the Mine currently release various hazardous substances into the ground water and the water and sediment in Mill Creek, and from there into the Owyhee River. Hazardous substance and contaminant releases from the Mine to Mill Creek and the Owyhee River are caused by the past deposition of mining waste in the historic Mill Creek channel
