

E. Cumulative Exposure

It is not expected that, when used as proposed, pythium oligandrum DV 74 would result in residues that are of toxicological concern. Pythium oligandrum DV 74 is applied to growing plants and crops for the purposes of disease control and stimulating plant resistance. Pythium oligandrum is widely distributed around the world, including the U.S. application of pythium oligandrum DV 74 to seeds, foliage, or soil will not result in a substantial increase in concentration in the environment. The level of pythium oligandrum DV 74 in the environment following application will decrease to levels similar to naturally occurring concentrations because the organism does not thrive in the absence of sufficient nutrients. The results of toxicity testing indicate there is no risk to human health or the environment from pythium oligandrum DV 74. There are no reports of ecological or human health hazards caused by pythium oligandrum in general or the strain pythium oligandrum DV 74 in specific. It does not produce recognized toxins, enzymes, or virulence factors normally associated with mammalian invasiveness or toxicity. The absence of acute toxicity or pathogenicity in laboratory animals demonstrates the benign nature of this strain. The limited survival of pythium oligandrum DV 74 and the lack of acute toxicity indicate that both the hazard and the exposure associated with the use of pythium oligandrum DV 74 are low.

F. Safety Determination

1. *U.S. population.* Acute toxicity studies have shown that pythium oligandrum DV 74 is not toxic, pathogenic, or infective to mammals. The major intended use of pythium oligandrum DV 74 is applied to growing plants and crops for the purposes of disease control and stimulating plant resistance. The level of pythium oligandrum DV 74 in the environment following application will decrease to levels similar to naturally occurring concentrations because the organism does not thrive in the absence of sufficient nutrients. The results of toxicity testing indicate there is no risk to human health or the environment from pythium oligandrum DV 74. There are no reports of ecological or human health hazards caused by pythium oligandrum in general or the strain pythium oligandrum DV 74 in specific. It does not produce recognized toxins, enzymes, or virulence factors normally associated with mammalian invasiveness or toxicity. The absence of

acute toxicity or pathogenicity in laboratory animals demonstrates the benign nature of this strain. The limited survival of pythium oligandrum DV 74 and the lack of acute toxicity indicate that both the hazard and the exposure associated with the use of pythium oligandrum DV 74 are low. There is a reasonable certainty of no harm to the general U.S. population from exposure to this active ingredient.

2. *Infants and children.* It is not expected that, when used as proposed, pythium oligandrum DV 74 would result in residues that are of toxicological concern. There is a reasonable certainty of no harm for infants and children from exposure to pythium oligandrum DV 74 from the proposed uses.

G. Effects on the Immune and Endocrine Systems

To date there is no evidence to suggest that pythium oligandrum DV 74 functions in a manner similar to any known hormone, or that it acts as an endocrine disrupter.

H. Existing Tolerances

There is no EPA tolerance for pythium oligandrum DV 74.

I. International Tolerances

A Codex Alimentarius Commission Maximum Residue Level (MRL) is not required for pythium oligandrum DV 74.
