

determine eligibility for benefits that are available to producers on the farm. The actual number of producers who must supply information varies depending on (1) the type of farming operation, and (2) the mix of crops planted (which has a direct relationship to the type of program the producer is eligible to participate in). In order to establish eligibility annually for these programs, a minimal amount of land and crop data about a producer's farming operation is required. The information is subsequently used to ensure compliance with program provisions, to determine actual production histories, and when disaster occurs, to verify crop loss. Producers must provide the information each year because variables such as previous year experience, weather occurrences and projections, market demand, new farming techniques and personal preferences affect the amount of land being farmed, the mix of crops planted, and the projected harvest.

Need and Use of the Information: FSA will collect information verbally from the producers during visits to the county offices. FSA will collect one or more of the following data elements, as required: Crop planted, planting date, crop's intended use, type or variety, practice (irrigated or non-irrigated), acres, location of the crop (tract and field), and the producer's percent share in the crop along with the names of other producers having an interest in the crop. Once the information is collected and eligibility established, the information is used throughout the crop year to ensure the producer remains compliant with program provisions. If information is not reported, FSA has no basis to calculate APH, losses could not be determined, and information for crop insurance expansion could not be provided to RMA.

SUPPLEMENTARY INFORMATION:

Background

Codex was established in 1962 by two United Nations organizations, the Food and Agriculture Organization (FAO) and the World Health Organization (WHO). Codex is the major international organization for encouraging fair international trade in food and protecting the health and economic interests of consumers. Through adoption of food standards, codes of practice, and other guidelines developed by its committees, and by promoting their adoption and implementation by governments, Codex seeks to ensure that the world's food supply is sound, wholesome, free from adulteration, and correctly labeled. In the United States, USDA, the Food and Drug Administration (FDA), and the Environmental Protection Agency (EPA) manage and carry out U.S. Codex activities.
