

down plans and providing habitat for waterfowl and shorebirds. These habitats and their uses would be monitored on the refuge to ensure that goals and objectives were met. Population and habitat surveys would be conducted throughout the refuges to develop baseline data to determine initial population levels and habitat conditions. Staff would monitor changes over time.

Wildlife-dependent recreation activities (e.g., hunting, fishing, wildlife observation, wildlife photography, and environmental education and interpretation) would be allowed, but only when and where they do not detract from, or conflict with, wildlife management activities and objectives. Infrastructures on the refuges (e.g., trails and blinds) would be developed primarily to conduct wildlife management activities. A visitor center and headquarters office would be constructed on Highway 82 at the Povall Tract.

Under this alternative, the Complex would continue to seek from willing seller lands within the present acquisition boundary. Highest priority would be given to those lands adjacent to existing refuge tracts and those lands supporting unique habitats. Additionally, the Complex would concentrate all future off-refuge partnerships on promoting more intensive wildlife management on privately owned lands. Personnel priorities would include employing a biologist and/or technician for the Complex and a forester to conduct forest management activities at Dahomey Refuge.

Alternative D. The Service's planning team has identified Alternative D as the preferred alternative. This alternative was developed based on public input and the best professional judgment of the planning team. The objectives and strategies presented in the draft plan were developed as a direct result of the selection of Alternative D.

Alternative D represents a combination and/or compromise between Alternative B (Public Use Emphasis) and Alternative C (Wildlife Management Emphasis). Whereas these two alternatives seek to maximize either expanded public use or expanded wildlife management opportunities, Alternative D seeks to optimize the benefits of the Complex to wildlife and people.

Under Alternative D, refuge lands would be more intensively managed than at present to provide high quality habitat for wildlife, particularly migratory birds. Any areas within the Complex with pumping capabilities

(wells) and water control structures would be managed for moist-soil vegetation or would be force-account farmed (with 100 percent of crops left standing) to benefit migratory waterfowl. Cooperative farming fields would be planted in rice, milo, corn, or soybeans (in order of preference) and flooded during the late fall and winter.

The wood duck nest box program would be expanded on all three refuges and may extend onto some Farmers Home Administration tracts that have suitable brood habitat. Boxes would be cleaned and maintained regularly to allow two and three broods per box per year.

Increased emphasis would be placed on meeting objectives of various step-down plans providing habitat for waterfowl and shorebirds. These habitats and their uses would be monitored on the refuge to ensure that goals and objectives were met. Population and habitat surveys would be conducted throughout the refuges to develop baseline data to determine initial population levels and habitat conditions. Staff would monitor changes over time.

This alternative would encourage more public recreational uses even while intensifying current habitat management. Additional staff, emphasis, and resources would be more or less evenly divided between enhancing public use opportunities and wildlife/habitat management. Hunting and fishing opportunities would be increased as funding and personnel allow. Moist-soil, cropland, forest, and wetland management would also intensify to the extent permitted by funding and staffing limits.

An auto tour, a canoe trial, one or more foot trail(s) and/or interpretative trail(s), an observation tower, and one or more blinds would be added for environmental education, photography, and watchable wildlife programs. Staff may be added for developing and presenting both on- and off-site environmental education and interpretation programs.

Under Alternative D, the Complex would continue to seek from willing seller lands within the present acquisition boundary, expanding Complex acreage by up to an additional 10 percent of the current acquisition boundary. Highest priority would be given to those lands adjacent to existing refuge tracts and those lands supporting unique habitats or offering wildlife-dependent public use opportunities. Additionally, the Complex would concentrate future off-refuge partnerships on promoting more

intensive wildlife management on privately owned lands.

Personnel priorities would include employing additional law enforcement offices for the Complex, an outreach coordinator to serve the Complex as a whole, a biologist and/or technician for each refuge to include the Farmers Home Administration tracts, and a forester to conduct forest management activities at Dahomey Refuge.

A visitor center and headquarters office would be constructed on Highway 82 at the Povall Tract and jointly shared with the Service's Private John Allen National Fish Hatchery. New sub-headquarters and visitor contact stations would be constructed at Coldwater River, Dahomey, and Tallahatchie Refuges.
