SUPPLEMENTARY INFORMATION: The Environmental Assessment of this federally assisted action documents that the project will not cause significant local, regional, state, or national impacts on the human environment. The findings of Sylvia Gillen, State Conservationist, indicate that the preparation and review of an environmental impact statement is not needed for this project.

The objectives of the proposed project are:

- To decrease the amount of water loss from the canal caused through seepage.
- To decrease the potential liability associated with the canal washing out and the resulting flooding.
- To increase public safety by piping the canal.

The proposed action is to replace the St. George and Washington Canal with a buried pipeline. The existing concrete canal lining would be removed and a pipeline would be placed in the existing trench. Approximately 9 miles of pipeline would be welded together and then lifted and placed into the canal alignment.

Copies of the FONSI and Environmental Assessment are available by request from Sylvia Gillen, Utah State Conservationist. Basic data developed during the environmental evaluation are on file and may be reviewed by contacting Sylvia Gillen, Utah State Conservationist. Requests may be submitted to: Sylvia Gillen, State Conservationist, Natural Resources Conservation Service, Wallace F. No administrative action on implementation of this project will be taken until 30 days after the date of this notice is published.

(This activity is listed in the Catalog of Federal Domestic Assistance under No. 10.902, Soil and Water Conservation and Environmental Quality Incentive Program 10.912.)
