#### SUPPLEMENTARY INFORMATION:

##### I. Abstract

The Census Bureau conducts the SIPP which is a household-based survey designed as a continuous series of national panels. New panels are introduced every few years with each panel usually having durations of one to five years. Respondents are interviewed at 4-month intervals or "waves" over the life of the panel. The survey is molded around a central "core" of labor force and income questions that remain fixed throughout the life of the panel. The core is supplemented with questions designed to address specific needs, such as obtaining information on retirement plans, taxes, and providing health care in the home. These supplemental questions are included with the core and are referred to as "topical modules."

The SIPP represents a source of information for a wide variety of topics and allows information for separate topics to be integrated to form a single, unified database so that the interaction between tax, transfer, and other government and private policies can be examined. Government domestic-policy formulators depend heavily upon the SIPP information concerning the distribution of income received directly as money or indirectly as in-kind benefits and the effect of tax and transfer programs on this distribution. They also need improved and expanded data on the income and general economic and financial situation of the U.S. population. The SIPP has provided these kinds of data on a continuing basis since 1983 permitting levels of economic well-being and changes in these levels to be measured over time.

The 2004 Panel is currently scheduled for 5 years and will include 15 waves of interviewing, which began in February 2004. The 2004 Panel is scheduled for 5 years because of the re-authoring of the instrument and re-engineering of the post data collection processing systems for the 2009 Panel. Approximately 62,000 households were selected for the 2004 Panel, of which, 46,500 are expected to be interviewed. We estimate that each household will contain 2.1 people 15 years of age or older, yielding 97,650 interviews in Wave 1 and subsequent waves. Interviews take 30 minutes on average. Three waves of interviewing will occur in the 2004 SIPP Panel during FY 2006.

The total annual burden for 2004 Panel SIPP interviews will be 146,475 hours in FY 2006.

The topical modules for the 2004 Panel Wave 7 collect information about:

- Informal Caregiving.
- Retirement and Pension Plan Coverage.

- Annual Income and Retirement Accounts.
- Taxes.

Wave 7 interviews will be conducted from February 2006 through May 2006.

A 10-minute reinterview of 3,100 people is conducted at each wave to ensure accuracy of responses. Reinterviews will require an additional 1,553 burden hours in FY 2006.

##### II. Method of Collection

The SIPP is designed as a continuing series of national panels of interviewed households that are introduced every few years with each panel having durations of 1 to 4 years. All household members 15 years old or over are interviewed using regular proxy-respondent rules. During the 2004 Panel, respondents are interviewed a total of 15 times (15 waves) at 4-month intervals making the SIPP a longitudinal survey. Sample people (all household members present at the time of the first interview) who move within the country and reasonably close to a SIPP primary sampling unit will be followed and interviewed at their new address. Individuals 15 years old or over who enter the household after Wave 1 will be interviewed; however, if these individuals move, they are not followed unless they happen to move along with a Wave 1 sample individual.
