SUPPLEMENTARY INFORMATION:

I. Background

The Bureau of Labor Statistics' Behavioral Science Research Laboratory (BSRL) conducts theoretical, applied, and evaluative research aimed at improving the quality of data collected and published by the Bureau. Since its creation in 1988, the BSRL has advanced the study of survey methods research, approaching issues of non-sampling error within a framework that draws heavily on the theories and methods of the cognitive, statistical, and social sciences. The BSRL research focuses primarily on the assessment of survey instrument design and survey administration, as well as on issues related to interviewer training, the interaction between interviewer and respondent in the interview process, and the usability of data-collection instruments by both interviewers and respondents. Improvements in these areas result in better accuracy and response rates of BLS surveys, frequently reduce costs in training and survey administration, and further ensure the effectiveness of the Bureau's overall mission.

II. Current Action

The purpose of this request for clearance by the BSRL is to conduct cognitive and psychological research designed to enhance the quality of the

Bureau's data collection procedures and overall data management. The BLS is committed to producing the most accurate and complete data within the highest quality assurance guidelines. The BSRL was created to aid in this effort and over the past 17 years it has demonstrated the effectiveness and value of its approach. Over the next few years, demand for BSRL consultation is expected to remain in demand as approaches are explored and tested for dealing with increasing nonresponse in key Bureau surveys. Moreover, as the use of web-based surveys continues to grow, so too will the need for careful tests of instrument design and usability, human-computer interactions, and the impact of multiple modes on data quality. The BSRL is uniquely equipped with both the skills and facilities to accommodate these demands.

The revisions in the accompanying clearance package reflect an attempt to accommodate the increasing interest by BLS program offices and other agencies in the methods used, and the results obtained, by the BSRL. This package reflects planned research and development activities for FY2006 through FY2008, and its approval will enable the continued productivity of a state-of-the-art, multi-disciplinary program of behavioral science research to improve BLS survey methodology.
