SUPPLEMENTARY INFORMATION:

The Privacy Act embodies fair information principles in a statutory framework governing the means by which the United States Government collects, maintains, uses and disseminates personally identifiable information. The Privacy Act applies to information that is maintained in a "system of records." A "system of records" is a group of any records under the control of an agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual. The Privacy Act requires each agency to publish in the **Federal Register** a description denoting the type and character of each system of records that the agency maintains, and the routine uses that are contained in each system in order to make agency record keeping practices transparent, to notify individuals regarding the uses to which personally identifiable information is put, and to assist the individual in finding such files within the agency.

The Department of Homeland Security (DHS), Office of Inspector

General (OIG) is updating and republishing a Privacy Act system of records within OIG Headquarters for its investigative files. Pursuant to the savings clause in the Homeland Security Act of 2002, Public Law 107-296, sec. 1512, 116 Stat. 2310 (Nov. 25, 2002) (6 U.S.C. 552), DHS components and offices could continue to rely on completed administrative actions after creation of the Department until those actions were amended, modified, superseded, terminated, set aside, or revoked. Two system notices previously supported the collection of investigation information by the DHS OIG, FEMA/IG-1 (General Investigative Files) and Treasury/DO .190 (Investigation Data Management System). The DHS OIG is now updating and republishing under its own nomenclature a system notice the Investigations Data Management System to cover the same records previously covered by these legacy system notices.

The DHS Inspector General is responsible for conducting and supervising audits, investigations, and inspections relating to the programs and operations of the Department. The OIG examines, evaluates and, where necessary, critiques these operations and activities, recommending ways for the Department to carry out its responsibilities in the most effective, efficient, and economical manner possible.

The Investigations Data Management System (IDMS) allows the OIG to receive and process allegations of violations of criminal, civil, or administrative laws and regulations relating to DHS employees, contractors and other individuals and entities associated with the DHS. IDMS also allows the OIG to manage information provided during the course of such investigations and, in the process, to facilitate its management of investigations. Through the IDMS, the OIG can create a record showing the disposition of allegations; track actions taken by DHS management regarding misconduct; track legal actions taken after referrals to the United States Department of Justice for prosecution; provide a system for creating reporting statistical information; and track OIG investigators' firearms qualification records and government property records.

This system notice makes several changes to the existing record systems on which DHS had been relying. It changes the address of the system location, revises the routine uses to conform them more closely to the needs and requirements of DHS, and more fully describes the categories of

individuals and of records that are maintained in IDMS.

In accordance with 5 U.S.C. 552a(r), a report of this revised system of records has been provided to the Office of Management and Budget (OMB) and to the Congress.
