Under Article 1904 of the Agreement, which came into force on January 1, 1994, the Government of the United States, the Government of Canada and the Government of Mexico established *Rules of Procedure for Article 1904 Binational Panel Reviews* ("Rules"). (c) The panel review shall be limited to the allegations of error of fact or law, including the jurisdiction of the investigating authority, that are set out in the Complaints filed in the panel review and the procedural and substantive defenses raised in the panel review.

SUPPLEMENTARY INFORMATION:

I. Abstract

Estuary habitat restoration project information (e.g., location, habitat type, goals, status, monitoring information) is collected in order to populate a restoration project database mandated by the Estuary Restoration Act (ERA) of 2000. The Estuary Restoration Act Database (ERAD) contains information for estuary habitat restoration projects funded through the ERA as well as non-ERA project data that meet quality control requirements and data standards established under the Act. The database provides information to improve restoration methods, provides the basis for required reports to Congress, and tracks estuary habitat acreage restored. It is accessible to the public via the Internet for data queries and project reports. Recipients of ERA funds are

required to submit specific information on habitat restoration projects into the ERAD database through an interactive Web site available over the Internet. The projects that are not funded through the ERA can be voluntarily entered into the database by project managers. Other federal agency and private grant programs may also require recipients to enter project information in the ERAD database.

II. Method of Collection

Project managers will electronically submit estuary restoration project information via NOAA's Estuary Restoration Act Database Web site (<https://neri.noaa.gov/>). The Web site contains a user-friendly data entry interface for project managers to enter and submit project information to the ERAD database. The data entry interface consists of a series of screens, containing several pull-down menus and text boxes, where users can enter specific project information (e.g. location, acreage restored, contacts, monitoring information). To facilitate the collection of information through the data entry interface, NOAA Fisheries provides worksheets containing database fields that can be downloaded and printed from the Web site. These worksheets can be used by project managers to guide information collection, and can then serve as a reference as project managers enter project information through the Web site. The reporting forms are also available in paper format to be sent to project managers as necessary.
