

Currently, SSI recipients report changes on Form SSA-8150, Reporting Events—SSI, or to an SSA teleservice representative through SSA's toll-free telephone number, or they visit their local Social Security office.

The SSI wage reporting program area has the highest error rate largely due to non-reporting, which accounts for approximately \$500 million in overpayments each year. Consequently, SSA is evaluating methods for increasing reporting. SSA is conducting a pilot to test an additional method for individuals to report wages for the SSI program. We are testing to determine if, given an easily accessible automated format, individuals will increase compliance with reporting responsibilities. Increased timely reporting could result in a decrease in improper payments. SSA will also be testing the use of knowledge-based authentication to determine if this is an effective method of accessing SSA's system. Lastly, SSA will test recent system enhancements and additional systems enhancements expected in May 2006 that will make reporting easier.

During the pilot, participants who need to report a change in earned income will call an SSA toll-free telephone number to report the change. The participants will access SSA's system using knowledge-based authentication (providing name, SSN and date of birth). Participants will either speak their report (voice recognition technology) or key in the information using the telephone key pad. SSA will issue receipts to participants who report wages using this method. Respondents to this collection are SSI recipients, deermors and representative payees of recipients who agree to participate in the pilot.

Background

This memorandum clarifies FAA guidance on the design, certification, and continued airworthiness of control surfaces that rely on retention of restraint stiffness for flutter prevention. These control surfaces typically do not have added mass balance, but there are some that are partially mass balanced for which the guidelines would also apply. This memorandum provides acceptable means of establishing and certifying freeplay limits and inspection

procedures, provides guidance for managing freeplay over the airplane service life, and provides a means of finding compliance for control system designs whose failure can result in a nonlinear aeroelastic configuration and limit cycle oscillation (LCO). This memorandum provides interim guidelines and standardized methods of compliance that address the inadequacies of current guidance, until the FAA revises the applicable guidance contained in AC 25.629-1A.

Issued in Renton, Washington, on April 9, 2006.

Ali Bahrami,

Manager, Transport Airplane Directorate, Aircraft Certification Service.
