## II. What Action is the Agency Taking?

EPA is printing a summary of each pesticide petition received under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, proposing the establishment or amendment of regulations in 40 CFR part 180 for residues of pesticide chemicals in or on various food commodities. EPA has determined that this pesticide petition contains data or information regarding the elements set forth in FFDCA section 408(d)(2); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the pesticide petition. Additional data may be needed before EPA rules on this pesticide petition.

Pursuant to 40 CFR 180.7(f), a summary of the petition included in this notice, prepared by the petitioner along with a description of the analytical method available for the detection and measurement of the pesticide chemical residues is available on EPA's Electronic Docket at <http://www.regulations.gov/>. To locate this information on the home page of EPA's Electronic Docket, select "Quick Search" and type the OPP docket ID number. Once the search has located the docket, clicking on the "Docket ID" will bring up a list of all documents in the docket for the pesticide including the petition summary.

## New Tolerance

*PP 3F6571.* Syngenta Crop Protection, Inc., P.O. Box 18300, Greensboro, NC 27419, proposes to establish a tolerance for residues of the herbicide trinexapac-ethyl, cyclohexanecarboxylic acid, 4-(cyclopropylhydroxymethylene)-3,5-dioxo-, ethyl ester expressed as its primary metabolite CGA-179500, cyclohexanecarboxylic acid, 4-(cyclopropylcarbonyl)-3,5-dioxo- in or on food and feed commodities grasses grown for seed: grass, hay at 2.0 parts per million (ppm); grass, forage at 1.5 ppm; and cattle/goat/horse/sheep (fat/meat/meat byproducts) at 0.05 ppm.

Syngenta crop protection has submitted a practical analytical method (AG-110-01) detecting and measuring levels of trinexapac-ethyl expressed as its major metabolite CGA-179500, in or on food with a limit of quantitation (LOQ) that allows monitoring of food with residues at or above the levels set in the proposed tolerances. EPA has validated this method and copies have been provided to the Food and Drug Administration (FDA) for insertion into the Pesticide Analytical Manual (PAM) II. Because residues in the animal diets indicate that the transfer of residues will be at or near the limit of detection, Syngenta Crop Protection, Inc. proposes that the Nature of Residue study can be used to define the Magnitude of Residue in livestock.
