## II. What Action is the Agency Taking?

EPA is printing a summary of a pesticide petition received under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, proposing the establishment or amendment of regulations in 40 CFR part 180 for residues of pesticide chemicals in or on various food commodities. EPA has determined that this pesticide petition contains data or information regarding the elements set forth in FFDCA section 408(d)(2); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the pesticide petition. Additional data may be needed before EPA rules on this pesticide petition.

Pursuant to 40 CFR 180.7(f), a summary of the petition included in this notice, prepared by the petitioner along with a description of the analytical method available for the detection and measurement of the pesticide chemical residues is available on EPA's Electronic Docket at <http://www.regulations.gov>. To locate this information on the home page of EPA's Electronic Docket, select "Quick Search" and type the OPP docket ID number. Once the search has located the docket, clicking on the "Docket ID" will bring up a list of all documents in the docket for the pesticide including the petition summary.

*PP 4F6890.* E. I. du Pont de Nemours and Company, Laurel Run Plaza, P.O. Box 80038, Wilmington, DE 19880-0038 and Interregional Research Project No. 4 (IR-4), 681 Highway No.1 South, North Brunswick, NJ 08902, proposes to

establish a tolerance for residues of the herbicide tribenuron methyl (methyl 2-[[[(4-methoxy-6-methyl-1,3,5-triazin-2-yl)methylamino]carbonyl]amino]sulfonyl] benzoate) in or on field corn and grain sorghum (forage, grain, and stover); rice (grain and straw); soybean, seed; and sunflowers at 0.05 parts per million (ppm).

Various analytical methods are available for the determination of residues of tribenuron methyl in these food and feed commodities. The analysis of sunflower samples were conducted using a high pressure liquid chromatography (HPLC) with column switching and ultraviolet (UV) detection. The limit of quantitation (LOQ) for the analysis of sunflower seed was 0.05 ppm based on a 5 gram sample. Residues for rice (grain and straw), field corn, and grain sorghum (forage and stover) were determined with an analytical method utilizing sample extraction by homogenization in a potassium phosphate buffer solution. The extracts were cleaned up and concentrated by solid-phase extraction. Analysis was performed by reverse-phase HPLC and quantitatively analyzed by tandem mass spectrometric detection. The target LOQ was 0.05 ppm in these commodities. Residues in field corn and grain sorghum (grain), and soybean seed were determined by an analytical method utilizing liquid chromatography/liquid chromatography/mass spectrometry (LC/LC/MS) analysis. The analytes were resolved by HPLC chromatography and quantitatively analyzed by tandem mass spectrometric detection. The LOQ was 0.05 ppm in these commodities.
