Title: Application for Reference and Equivalent Method Determination.

ICR numbers: EPA ICR No. 0559.09; OMB Control No. 2080-0005.

ICR Status: This ICR is scheduled to expire on January 31, 2008. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: To determine compliance with the NAAQS, State air monitoring agencies are required to use, in their air quality monitoring networks, air monitoring methods that have been formally designated by the EPA as either

reference or equivalent methods under EPA regulations at 40 CFR part 53. A manufacturer or seller of an air monitoring method (e.g. an air monitoring sampler or analyzer) that seeks to obtain such EPA designation of one of its products must carry out prescribed tests of the method. The test results and other information must then be submitted to the EPA in the form of an application for a reference or equivalent method determination in accordance with 40 CFR part 53. The EPA uses this information, under the provisions of part 53, to determine whether the particular method should be designated as either a reference or equivalent method. After a method is designated, the applicant must also maintain records of the names and mailing addresses of all ultimate purchasers of all analyzers or samplers sold as designated methods under the method designation. If the method designated is a method for fine particulate matter (PM_{2.5}) and coarse particulate matter (PM_{10-2.5}), the applicant must also submit a checklist signed by an ISO-certified auditor to indicate that the samplers or analyzers sold as part of the designated method are manufactured in an ISO 9001-registered facility. Also, an applicant must submit a minor application to seek approval for any proposed modifications to previously designated methods.

A response to this collection of information is voluntary, but it is required to obtain the benefit of EPA designation under 40 CFR part 53. Submission of some information that is claimed by the applicant to be confidential business information may be necessary to make a reference or equivalent method determination. The confidentiality of any submitted information identified as confidential business information by the applicant will be protected in full accordance with 40 CFR 53.15 and all applicable provisions of 40 CFR part 2.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 341 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any

previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: State, local, or tribal government.

Estimated Number of Respondents: 22.

Frequency of Response: Annual.

Estimated Total Annual Hour Burden: 7,492 hours.

Estimated Total Annual Cost: \$650,494, includes \$132,668 annualized capital or O&M costs.

Changes in the Estimates: There is an increase of 50 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This increase is due to the nature of the proposed revisions to the National Ambient Air Quality Standard for particulate matter.

Dated: July 11, 2006.

Sara Hisel McCoy,

Acting Director, Collection Strategies Division.

Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Integrated Iron and Steel Manufacturing were proposed on July 13, 2001 (66 FR 36835), and promulgated on May 20, 2003 (68 FR 27645). The proposed amendments were published August 30, 2005 (70 FR 51306). These standards apply to new and existing sinter plants, blast furnaces, and basic oxygen process furnace (BOPF) shops at integrated iron and steel manufacturing facilities that are major sources of hazardous air pollutants (HAPs), or are collocated at major sources. This information is being collected to assure compliance with 40 CFR part 63, subpart FFFFF.

Owners and operators of affected sources are subject to the monitoring, recordkeeping and reporting requirements of 40 CFR part 63, subpart A, the General Provisions, unless specified otherwise in the regulation. This rule requires sources to submit initial notifications, conduct performance tests if source is using an add-on control device, and submit periodic compliance reports. In addition, sources are required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation if using an add-on control device; any period during which the monitoring system is inoperative; parametric monitoring data; system maintenance and calibration; and work practices to demonstrate
