

successful implementation of the goals and objectives of the Reserve.

The mission of the Reserve management plan is to improve the stewardship of the region's estuarine and coastal watershed ecosystems. The management plan identifies the following priority issues facing the Reserve: Water quality/eutrophication/watershed land-use; climate change/sea level rise/shoreline change; and assessment of ecosystem response to natural variability and human impacts.

The management plan identifies five goals that are addressed through active management. The goals are (1) improve the understanding of coastal ecosystems and the human influences on them, (2) improve environmental literacy in communities to enable environmentally-sustainable decision-making, (3) demonstrate sustainable stewardship of the land and water ecosystems within the Reserve to serve as a model for community stewardship in the region, (4) foster dialogue and development of coastal ecosystem management solutions through sustained community engagement, (5) improve operations, infrastructure and stature of the Reserve.

The Reserve's management plan addresses these goals with specific programs for resource management and protection and stewardship, research and monitoring, education and training, public access and visitor use, program administration, and partnerships and regional coordination.
