

collectively. It would cost considerably more to hook up everyone to not only a river source, but also to a lake source. When evaluating economic feasibility, the costs of supply lines running to every single household in the area must be included * * * this includes every household up in the foothills, out in the middle of the woods, and not just in the metropolitan areas. Although there may be a collection of alternative water supplies that could serve the City of Vancouver, this still does not meet the EPA guidance criteria for alternative sources, which states that it has to be shown that the alternative source could supply the entire population that lives over the aquifer. We requested information from the public that would show us if any such alternatives exist, but none were supplied to us.

One government agency requested the EPA provide the technical basis for listing Salmon Creek and Lacamas Creek as losing stream reaches. In response, both creeks were measured as losing reaches by the U.S. Geological Survey in stream measurements made in 1996.

One government agency expressed concern that EPA is unwilling to guarantee in writing that Federal agency Memorandums of Understanding (MOU's) will only address technical project elements and not diverge into non-technical issues such as land use or other local jurisdiction decisional concerns. In response, EPA creates MOU's with other Federal agencies to ensure that that EPA receives project information on all federally-financially assisted projects that are located in a Sole Source Aquifer and which have the potential to contaminate such aquifer. EPA's role is to review the projects and either approve as-is, or recommend changes in the project design that offer aquifer protection. Such recommended changes in project designs could have an indirect impact on local land use. EPA's direct role in local projects is solely the technical review of federally-financially assisted projects.

VI. Summary

This determination affects only the Troutdale Aquifer System located in Clark County, Washington. As a result of this determination, all Federal financially-assisted projects proposed in the designated area will be subject to EPA review to ensure that they do not create a significant hazard to public health.

Dated: August 14, 2006.

Ron Kreizenbeck,

Acting Regional Administrator, Region 10.
