SUPPLEMENTARY INFORMATION:

I. Background

The Occupational Code Assignment form was developed as a public service to the users of the Occupational Information Network (O*NET), in an effort to help them in obtaining occupational codes and titles for jobs that they were unable to locate in O*NET.

The O*NET system classifies nearly all jobs in the United States economy. However, new specialties are constantly evolving and emerging. The use of the OCA is voluntary and is provided (1) as a uniform format to the public and private sector to submit information in order to receive assistance in identifying an occupational code, (2) to provide input to a database of alternative (lay) titles to facilitate searches for occupational information in the O*NET OnLine (<http://online.onetcenter.org>), O*NET Code Connector (<http://www.onetcodeconnector.org>), as well as America's Career InfoNet (<http://www.acinet.org>), and (3) to assist the O*NET system in identifying potential occupations that may need to be included in future O*NET data collection efforts.

The OCA process is designed to help the occupational information user relate an occupational specialty or a job title to an occupational code and title within the framework of the Standard Occupational Classification (SOC) based O*NET system. The O*NET-SOC system consists of a database that organizes the work done by individuals into approximately 1,000 occupational categories. In addition, O*NET occupations have associated data on the importance and level of a range of occupational characteristics and requirements, including Knowledge,

Skills, Abilities, Tasks, and Work Activities. Since the O*NET-SOC system is based on the 2000 SOC system, identifying an O*NET-SOC code and title also facilitates linkage to national, state, and local occupational employment and wage estimates.

II. Review Focus

The Department of Labor is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
