I. Funding Opportunity Description

Purpose of Program: The purpose of this program is to: (1) Improve results for children with disabilities by promoting the development, demonstration, and use of technology; (2) support educational media services activities designed to be of educational value in the classroom setting to children with disabilities; and (3) provide support for captioning and video description that is appropriate for use in the classroom setting.

Priority: In accordance with 34 CFR 75.105(b)(2)(iv), this priority is from allowable activities specified in the statute (see sections 674 and 681(d) of the Individuals with Disabilities Education Act (IDEA)).

Absolute Priority: For FY 2007 this priority is an absolute priority. Under 34 CFR 75.105(c)(3), we consider only applications that meet this priority.

This priority is:

Technology and Media Services for Individuals With Disabilities—Research on Technology Effectiveness and Implementation for Children With Disabilities: Web-Supported Instructional Approaches

Background: A number of Office of Special Education Programs (OSEP)-funded projects have developed and tested World Wide Web-supported approaches for improving educational results for children with disabilities. In some cases, these projects have used generally available Web resources (e.g., newspaper sites, museum sites, and search engines). In other cases, the projects have developed specialized Web sites (e.g., simulation of learning environments, discussion boards, and strategy reminders) to improve student learning.

Web-supported educational approaches have a number of potential benefits for students with disabilities. The Web can support varied learning strategies and Web-supported activities can be designed to address different student needs. For example, they can provide supports to compensate for learning difficulties, sensory impairments, and academic skill deficits. Research on the benefits of

Web-supported approaches for students with disabilities is not entirely conclusive, however. While some studies have found the Web or some of its features to be effective in teaching and learning, other studies have not found the Web to be effective in teaching. We also have little information about whether Web-based resources that provide access for one population of students may create accessibility barriers for others (e.g., graphic features may not be accessible to students with visual disabilities, hyper-linked resources or graphic organizers may increase intellectual demands and thus create barriers for students with cognitive disabilities). Finally, the effectiveness of Web-supported instruction in widespread use in typical educational environments has not been fully explored.

Priority: This priority supports a Center to conduct a systematic program of research on the use of Web-supported instructional approaches to improve access to, and participation and progress in, the general curriculum for students with disabilities. In carrying out its research, the Center must apply the principles of universal design (i.e., design of products that will be usable by children with different disabilities, to the greatest extent possible, with minimal need for additional adaptations).

In their applications, applicants must—

(a) Propose an operational definition of Web-supported instructional approaches to be used in a program of research;

(b) Describe their access to existing Web-supported instructional materials that will allow the Center to proceed quickly with the research without substantial time devoted to additional development;

(c) Demonstrate knowledge of the state of practice in terms of use of products, sources of products, and research on the use of the Web to support instruction;

(d) Present a plan for conducting a program of research to answer the following questions: (1) Do Web-supported instructional approaches improve learning of academic content for students with disabilities in actual educational settings with typical resources and levels of teacher support? (2) What characteristics of Web-supported instruction facilitate or impede access to and learning of academic content for students with disabilities? (3) What student characteristics (e.g., disability, technology skills) and contextual factors (e.g., teacher training, hardware
