ARMIS (Automated Reporting and Management Information Systems) was implemented to facilitate the timely and efficient analysis of revenue

requirements, rates of return and price caps; to provide an improved basis for audits and other oversight functions; and to enhance the Commission's ability to quantify the effects of alternative policy. The Operating Data Report, FCC Report 43-08, collects annual statistical data in a consistent format that is essential for the Commission to monitor network growth, usage, and reliability. The information contained in the ARMIS Report 43-08 provides the necessary detail to enable the Commission to fulfill its regulatory responsibilities. Automated reporting of these data greatly enhances the Commission's ability to process and analyze the extensive amounts of data that are needed to administer its rules. When the Commission adopted a Report and Order, it took action to further accelerate the development of competition in the local and long-distance telecommunications market, and to further establish explicit universal service support that will be sustainable in an increasingly competitive marketplace, pursuant to the mandate of the Telecommunications Act of 1996 (1996 Act). In FCC 03-36 (Order) the Commission adopted rules and regulations designed to eliminate operational barriers to competition in the telecommunications services market and implement certain provisions of Section 251, including the unbundled network elements (UNE) obligations of incumbent local exchange carriers (LECs). In the Order on Remand (FCC 04-290) the Commission responded to a decision by the United States Court of Appeals for the District of Columbia that vacated the "sub-delegation" of authority to state commissions and vacated and remanded certain nationwide impairment findings, including mass market switching and dedicated transport. This resulted in the removal of the "State Commission UNE Proceeding" section of this collection.
