The Proposal

The FAA is considering an amendment to the Code of Federal Regulations (14 CFR Part 71), which would revise the Class E airspace at Red Dog Airport, AK. The intended effect of this proposal is to revise Class E airspace upward from 700 ft. and 1,200 ft. above the surface to contain Instrument Flight Rules (IFR) operations at Red Dog Airport, AK.

The FAA Instrument Flight Procedures Production and Maintenance Branch has developed two new Special RNAV RNP instrument approaches and one Special RNAV RNP departure procedure for the Red Dog Airport. These procedures will be only flown by Alaska Airlines. The new approaches are (1) The Area Navigation (RNAV) Required Navigation Performance (RNP) Runway (RWY) 05 and (2) the RNAV RNP RWY 20. The departure procedure is the IHOPO ONE RNAV RNP Departure. Class E controlled airspace extending upward from 700 ft. and 1,200 ft. above the surface within the Red Dog Airport area would be revised by this action. The proposed airspace is sufficient in size to contain aircraft executing the Special instrument procedures at the Red Dog Airport.

The area would be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 in FAA Order 7400.9P, *Airspace Designations and Reporting Points*, dated September 1, 2006, and effective September 15, 2006, which is incorporated by reference in 14 CFR 71.1. The Class E

airspace designations listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle 1, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority.

This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart 1, Section 40103, Sovereignty and use of airspace. Under that section, the FAA is charged with prescribing regulations to ensure the safe and efficient use of the navigable airspace. This regulation is within the scope of that authority because it proposes to create Class E airspace sufficient in size to contain aircraft executing instrument procedures at the Red Dog Airport and represents the FAA’s continuing effort to safely and efficiently use the navigable airspace.

40 CFR Part 52

[EPA–R08–OAR–2006–0502; FRL–8257–8]

Approval and Promulgation of Air Quality Implementation; North Dakota; Revisions to New Source Review Rules

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve revisions adopted by North Dakota on February 1, 2005 to Chapter 33–15–15 of the North Dakota Administrative Code (Prevention of Significant Deterioration of Air Quality) that incorporate EPA’s December 31, 2002 NSR Reforms. North

Dakota submitted the request for approval of these rule revisions into the State Implementation Plan (SIP) on February 10, 2005. North Dakota has a federally-approved Prevention of Significant Deterioration (PSD) program for new and modified sources impacting attainment areas in the State. North Dakota is in attainment for all pollutants, and does not have a SIP-approved non-attainment permit program.

On December 31, 2002, EPA published revisions to the Federal Prevention of Significant Deterioration (PSD) and non-attainment NSR regulations (67 FR 80186). These revisions are commonly referred to as “NSR Reform” regulations and became effective nationally in areas not covered by a SIP on March 3, 2003. These regulatory revisions include provisions for baseline emissions determinations, actual-to-future-actual methodology, plantwide applicability limits (PALs), clean units, and pollution control projects (PCPs). On November 7, 2003, EPA published a reconsideration of the NSR Reform regulations that clarified two provisions in the regulations (68 FR 63021). On June 24, 2005, the United States Court of Appeals for the District of Columbia Circuit issued a ruling on challenges to the December 2002 NSR Reform revisions (*State of New York v. EPA*, 413 F.3d 3 (D.C. Cir. 2005)). Although the Court upheld most of EPA’s rules, it vacated both the Clean Unit and the Pollution Control Project provisions and remanded back to EPA the “reasonable possibility” standard for when a source must keep certain project-related records.

North Dakota is seeking approval at this time for its PSD regulations to implement the NSR Reform provisions that have not been vacated by the June 24, 2005, court decision.
