As the first step in this process, the USGS is requesting that each state provide an assessment of their current collections resources and data preservation needs. This information will provide a snapshot of the diversity of scientific collections held, supported, or used by state geological surveys.

The inventory covers geological and geophysical collections including:

(1) Physical collections such as cores, rocks, minerals, fossils, and liquid samples (such as oil).

(2) Digital collections (such as analyses and well logs) that are/were related to physical collections.

(3) Paper and other records (such as microfiche and tapes) that need to be converted to digital format (such as seismic lines and historical geological records).
