

maximum distribution and use of CD-1 throughout the industry, and for participating companies to complete full training cycles.

#### *Description of Data Collection*

TSA will ask participating companies that complete the Security Awareness Training CD-1, to log on to a TSA-managed secure Web site to provide feedback on the effectiveness of the training.

Respondent companies may respond with feedback in one of two ways: (1) They may choose to submit one subjective, corporate response as to the employee participation levels or effectiveness of the CD-1 (i.e., the CD-1 significantly increased the security awareness levels for a majority of Company X's employees); or (2) they may provide objective information based on their company's own survey of its employees. For metrics purposes, TSA will also request that participating companies provide the total number of company employees, the number of employees who have completed the CD-1 training, and the numbers of projected employees that will complete the training in the future. In many cases, a single company may own more than one pipeline transmission or local distribution system, thus, a single CD-1 and corresponding effectiveness survey responses may represent more than one individual pipeline system. In order to discern the total number of pipeline companies utilizing the CD-1, TSA will inquire as to the number of individual pipeline systems that will be using the CD-1, in the event a parent company is requesting the CD. However, because participation in the CD-1 training and providing feedback in voluntary (that is, some companies that may utilize the CD-1 may not provide feedback), the TSA metrics will be based solely on companies that provide feedback.

In order for interested companies to submit information, TSA will set up a separate file for each company on the secure Web site into which each company can provide feedback. TSA will provide each company or individual pipeline system with a password in order to access their individual company or system file. Companies/individual systems may access and update the information contained within their file at any time. The name of the participation company or point or contact information will be collected only for the purpose of setting up the company feedback file and for identify verification when companies log onto the Web site.

#### *Use of Results*

The primary use of this information is to allow TSA to assess the effect of the CD-1 project on raising the baseline level of security awareness within the pipeline industry. The secondary purpose of this information is for TSA to obtain, based on individual company input, an indication of CD-1 user participation and employee participation levels throughout the pipeline industry.

#### *Frequency*

Most companies administer their security awareness training curriculum on an annual or biannual cycle. Therefore, a company would provide TSA sufficient feedback approximately every two years. Typically, companies will generate quarterly or annual reports on employee training progress. Thus, companies may submit updated feedback between one and four times per year, which TSA equates to an average frequency for this collection of two times per year. The time companies expend to respond to this collection will vary slightly depending on whether a company chooses to submit an overall company subjective opinion response provided by a knowledgeable corporate official, or an objective response based on results of its own training feedback survey. However, if a company chooses to submit one overall company opinion, it is likely that a person with some familiarity with the company's security posture will be responsible for providing the feedback survey. Regardless of whether a company submits an objective response based on the results of its own training course survey, or an opinion of one corporate official, the only time expenditure required would result from electronically entering the requested information on the TSA survey Web site. This is because the information gathered will already be in the possession of the company and therefore, impart no additional burden on the respondent.

Out of approximately 2,200 individual pipeline companies, TSA estimates that on an annual basis an average of 300 companies will provide feedback on the CD-1. TSA estimates the average hour burden per response per pipeline company or system will be approximately 20 minutes. Assuming that, on average, a company will update their feedback twice per year, TSA estimates the total annual hour burden will be 40 minutes per pipeline company or system. Therefore, TSA estimates the total annual hour burden will be approximately 200 hours per

year for all pipeline industry participants [300 companies × 40 minutes = 200 hours].

Dated: Issued in Arlington, Virginia, on January 23, 2007.
