II. Contractor Requirements

Under Contract No. EP06H000149, the contractor will perform the following: Develop surface water scenarios based on the type of assessment needed. A list will be supplied by the EPA Project Officer. For the standard risk assessment process, these typically include a national or regional scenario which is used in the screening-level risk assessment. Occasionally, a more localized standard scenario or type may be needed to answer specific questions related to risk and mitigation.

The contractor shall use the guidance provided, including the Pesticide Root Zone Model (PRSM) Guidance for Selecting Field Crop and Orchard Scenario Development Input Parameters, the Input Parameter Guidance, and the example input scenario file to develop a single scenario for each of the identified crop/geography combinations. This task may also include the development of scenarios specifically tailored to assessing risks to endangered organism which need refinement based on species occurrence, habitat, life pattern, pesticide-use pattern, and agronomic practices. The need to rapidly develop local scenarios to provide estimated environmental concentrations (EECs) relevant to a specific endangered species is critical to the assessment of risk to endangered species.

OPP has determined that the contracts described in this document involve work that is being conducted in connection with FIFRA, in that pesticide chemicals will be the subject of certain evaluations to be made under
