**CCR5-Specific Human Monoclonal Antibodies**

*Description of Technology:* The subject invention provides the composition claims related to anti-CCR5 monoclonal antibodies, their fusion protein, conjugates, derivatives, or fragments, DNA sequences encoding such antibodies, host cells containing such DNA sequences, as well as the methods to produce them recombinantly and their pharmacological composition.

It has been demonstrated that the HIV co-receptor CCR5 plays an important role in virus entry. The subject antibodies exhibited neutralization activity against HIV-1 infection by binding to cell associated CCR5 *in vitro*. Moreover, subject antibodies have potentially lower immunogenicity and toxicity, because they are fully human antibodies. Therefore, subject anti-CCR5 antibodies have a potential as a therapeutic and/or prophylactic in combination with other HIV-1 neutralizing antibodies and anti-retroviral drugs.

*Applications:* HIV treatment and prevention.

*Development Status:* *In vitro* data is available at this time.

*Inventors:* Dimiter S. Dimitrov and Mei-Yun Zhang (NCI).
