*Description:* BLS requests OMB approval to conduct interviews to replenish the pretest sample of the National Longitudinal Survey of Youth 1979 cohort (NLSY79). The NLSY79 is a nationally representative survey of people who were born in the years 1957 to 1964 and lived in the U.S. when the survey began in 1979. NLSY79 participants were interviewed annually from 1979 to 1994 and have been interviewed every two years since 1994. The focus of the survey is labor market experiences, but the survey also covers topics that affect or are affected by labor market activity. These topics include education, training, marital and family relationships, fertility, childcare, health, substance use, and others.

Prior to each round of the NLSY79, a pretest has been conducted with a separate, smaller sample to help ensure the proper functioning of questionnaires, procedures, and systems and to rectify any problems before the main fielding of the NLSY79. Over time, the size of the pretest sample has declined significantly, and the characteristics of pretest participants now differ so sharply from the characteristics of most NLSY79 participants that the pretest no longer is a useful tool to detect and remedy problems with the survey. For this reason, BLS and its contractors have decided to replenish the pretest sample. The process of replenishing the sample requires new sample members to be interviewed for about 15 minutes during the summer of 2007. The information obtained from this interview will be used for an input file during the NLSY79 Round 23 pretest that is planned for October 2007. Because the NLSY79 is longitudinal, the questions that respondents are asked in one round sometimes depend on the responses they provided in previous rounds. The summer 2007 interview is necessary to obtain information that will enable all

questions to function properly in the October 2007 pretest.
