

Paper discussing the results of Syngenta's amphibian studies conducted in 2005 - 2006. In addition, EPA has continued to review the open literature studies investigating whether atrazine exposure affects amphibian gonadal development. For this second SAP meeting, EPA plans to include only those studies that tested atrazine alone and examined atrazine's potential effects on amphibian gonadal development. Studies on mixtures of pesticides that include atrazine as well as studies of the potential for atrazine to cause adverse effects other than or in addition to amphibian gonadal development are not being considered for the SAP meeting.

In this Federal Register Notice, EPA is soliciting public comment on the completeness of its list of open literature studies on the potential effects of atrazine on amphibian gonadal development. If other publications relevant to these potential effects are available and have not been included in this list, EPA requests that citations be submitted during the comment period. If possible, a copy of the publication should be submitted as well.

EPA has reviewed the following list of relevant open literature studies in preparation for the October SAP meeting:
