#### SUPPLEMENTARY INFORMATION:

##### I. Background

FDA is announcing the availability of a guidance for industry entitled "Testing of Glycerin for Diethylene Glycol." This guidance explains that the agency recommends that certain analytical testing procedures be performed on glycerin to avoid the use of DEG-contaminated product. Specifically, the agency is recommending that all lots of glycerin received by a pharmaceutical manufacturing facility undergo identity testing that includes a test for DEG content. DEG contamination of glycerin can be detected by using specific analytical test procedures described in the United States Pharmacopeia monograph for glycerin, which quantifies the amount of DEG present at a detection level of 0.1 percent, as recommended by the interagency Diethylene Glycol Contamination Prevention Workshop of 1997. Repackers, pharmacy compounders, and others who distribute and prepare glycerin for use in drug products should test glycerin that is used, sold for use, or intended for use in drug products. This recommendation also applies to bulk or repackaged glycerin intended as an excipient or other component for a drug. In addition, pharmacies that purchase glycerin for use in compounding drug products should either test the glycerin or ensure that such testing was properly done by a reliable supplier.
