BILLING CODE 5001-06-M

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

Availability of a Tiered Final Environmental Impact Statement Containing a Draft Air Quality General Conformity Determination for the Proposed Construction of a Dredged Material Containment Facility in the Patapsco River, at Masonville, Baltimore City, MD

AGENCY: Department of the Army, U.S.
Army Corps of Engineers, DOD.

ACTION: Notice of availability.

SUMMARY: In accordance with
requirements of the National
Environmental Policy Act (NEPA), the
U.S. Army Corps of Engineers (USACE),
Baltimore District, has prepared a Final
Environmental Impact Statement (FEIS)
for the proposed construction of a
dredged material containment facility
(DMCF) by the Maryland Port
Administration (MPA). This FEIS was
prepared as part of the submission of
MPA's application for a Department of
the Army permit to construct the facility

in the Patapsco River, Baltimore City,
MD. This application will be evaluated
pursuant to Section 10 of the Rivers and
Harbors Act of 1899 and Section 404 of
the Clean Water Act.

The preferred alternative is for the
construction of a stone, sand, and
cofferdam structure that would impact
approximately 131 acres of waters of the
United States, including jurisdictional
wetlands. The structure would be
initially constructed to 10 feet above the
mean lower low water (MLLW)
elevation, with a future temporary
elevation to 42 feet above MLLW, and
an ultimate elevation of 36 feet above
MLLW. The project would also include
mechanical dredging of approximately
1.5 million cubic yards of overburden
material within the footprint of the
proposed disposal site, and the
placement of this material at the Hart
Miller Island disposal site, Baltimore
County, MD. On-site (Masonville
borrow) and offsite borrow material
(Seagirt borrow material and upland
borrow) would be used for the
construction of the containment facility.
The Seagirt borrow material would
come from the Seagirt Marine Terminal
Access Channel deepening and
widening project. The Draft EIS was
advertised in the **Federal Register** on
May 19, 2006 (71 FR 29128). A
supplement to the Draft EIS was
advertised in the **Federal Register** on
June 30, 2006 (71 FR 37545). The need
to prepare a Supplement was due to the
applicant's proposal to change the
source of borrow material for the
proposed construction of the preferred
alternative to include the use of suitable
material dredged from the Seagirt
Marine Terminal Access Channels. The
FEIS evaluates the construction of a
DMCF with a footprint of 141 acres,
which includes 131 acres of tidal open
water and wetlands. The DMCF would
be constructed to an initial height of 10
feet above MLLW and then raised to a
height of 42 feet above MLLW before
being graded to a final height of 36 feet
MLLW, which would be the same height
as the adjacent land. A detailed
description of the proposed project and
effects to the human environment are
discussed in the FEIS for the Masonville
DMCF. The FEIS outlines measures the
applicant may implement to address
impacts to air quality resulting from
activities described in the permit
application.
