The Laguna Cartagena National Wildlife Refuge was established in 1989 through a lease agreement with the Commonwealth of Puerto Rico. The present lagoon is a remnant of what was once a large open expanse of water and one of the most important freshwater habitats for migrating waterfowl and aquatic birds in Puerto Rico. Due to agricultural practices, about 90 percent of the lagoon is covered with cattail. In addition to the lagoon, there are uplands that include pastureland, abandoned sugar cane fields, and 263 acres in the foothills of the Sierra Bermeja. The total area of the refuge is 1,059 acres. The refuge objectives are to restore and maintain this locally important wetland ecosystem for the benefit of endangered species and migratory birds. These issues and the objectives along with others identified during the scoping process will be addressed during the development of the Draft CCP/EA.
