SUPPLEMENTARY INFORMATION:

I. Background

Section 101(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act) allows the mine operator or representative of miners to file a petition to modify the application of any mandatory safety standard to a coal or other mine if the Secretary determines that: (1) An alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard, or (2) the application of such standard to such mine will result in a diminution of safety to the miners in such mine. In addition, the regulations at 30 CFR 44.10 and 44.11 establish the requirements and procedures for filing petitions for modifications.

II. Petitions for Modification

Docket Number: M-2007-007-C.

Petitioner: Mingo Logan Coal Company, P.O. Box 553, Charleston, West Virginia 25322.

Mine: Mountaineer II Mine, (MSHA I.D. No. 46-09029), located in Logan and Boone Counties, West Virginia.

Regulation Affected: 30 CFR 75.1700 (Oil and gas wells).

Modification Request: The petitioner proposes to plug abandoned oil and gas wells, (including injection wells) to mine them or to reduce the barrier size. The petitioner proposes to: (1) Clean out and prepare the oil and gas wells; (2) plug the oil and gas wells to the surface using a cement plug and a small amount

of steel turnings; (3) plug the oil or gas wells using the vent pipe method; (4) plug the oil and gas wells for use as degasification boreholes; and (5) follow cut-through procedures whenever the petitioner reduces the safety barrier diameter to a distance less than the District Manager would approve or proceeds with an intent to cut-through a plugged well. The petitioner has listed additional specific procedures in this petition to implement the proposed alternative method. Individuals may review a complete description of the petition at the MSHA address listed in this notice. The petitioner asserts that the proposed alternative method will at all times guarantee no less than the same measure of protection afforded the miners under 30 CFR 75.1700.

Docket Number: M-2007-008-C.

Petitioner: The American Coal Company, 9085 Highway 34 North, Galatia, Illinois 62935.

Mine: Galatia Mine, (MSHA I.D. No. 11-02752), located in Saline County, Illinois.

Regulation Affected: 30 CFR 75.1700 (Oil and gas wells).

Modification Request: The petitioner requests modification of approved petition for modification, docket number M-88-246-C, addressing the drilling out and plugging of oil and gas wells at the Galatia Mine. This request is based on the following: (1) On occasion the mine operations have encountered wells drilled for oil and gas production that cannot be drilled out and plugged to meet the specifications in the approved petition for modification; (2) approved procedures are ineffective because the concrete used to plug the original wellbore is harder than the surrounding strata, making it difficult to keep the drill bit in the hole and on target for locating the original wellbore; (3) in the near future the petitioner will encounter hundreds of wells drilled for oil and gas production that it will be unable to drill out to meet the specifications in the approved petition for modification; and (4) a substantial number of the reserves at the mine will be rendered unmineable without the approval of this petition. The petitioner has listed specific procedures in this petition that will be used for compliance with the proposed alternative method including notification procedures; using driving sights; the availability of firefighting equipment; roof support; ventilation procedures; methane testing and other hazard prevention procedures. Individuals may review a complete description of the procedures at the MSHA address listed in this notice. The petitioner asserts that the proposed
