SUPPLEMENTARY INFORMATION:

Navigation and Vessel Inspection Circular (NVIC) 03-07

On January 25, 2007, the Coast Guard and Transportation Security Administration (TSA) issued a joint final rule "Transportation Worker Identification Credential Implementation in the Maritime Sector; Hazardous Material Endorsement for a Commercial Driver's License," referred to as the TWIC final rule. See 72 FR 3492. That rule, which became effective in major part on March 26, 2007, made significant changes to 33 CFR Chapter I Subchapter H, 46 CFR Chapter I Subchapter B, and 49 CFR Chapter XII Subchapter D. The final rule implements requirements under the Maritime Transportation Security Act of 2002, as amended by the Security and Accountability for Every Port Act of 2006 (SAFE Port Act), which requires, among other things, credentialed merchant mariners and workers with unescorted access to secure areas of vessels and facilities to undergo a security threat assessment and receive a biometric credential, known as a Transportation Worker Identification Credential (TWIC).

The Coast Guard has prepared NVIC 03-07, "Guidance for the Implementation of the Transportation Worker Identification Credential Program in the Maritime Sector," to provide guidance to transportation workers, owners and operators, and merchant mariners on implementation

of the new requirements. The information in this NVIC details the enrollment and issuance process, provides guidance for successful execution of compliance requirements, provides clarification of the regulations found in 33 CFR Parts 101 to 106 and 49 CFR Parts 1515, 1540, 1570 and 1572, and includes a more detailed discussion of the actions required by those regulations, with examples, to increase understanding and promote nationwide consistency. These guidelines are intended to help industry comply with the new regulations and the Coast Guard Captains of the Port (COTP) implement the TWIC Program.

Availability

NVIC 03-07 is available in the docket for this notice at those places indicated under **ADDRESSES** above. It is also available at the following Web sites: Homeport (<http://homeport.uscg.mil>) and the U.S. Coast Guard NVIC index (<http://www.uscg.mil/hq/g-m/nvic/index00.htm>).

Dated: July 3, 2007.

Background

The Florida scrub-jay (scrub-jay) is found exclusively in peninsular Florida and is restricted to xeric uplands (predominately in oak-dominated scrub). Increasing urban and agricultural development has resulted in habitat loss and fragmentation, which have adversely affected the distribution and numbers of scrub-jays.

The total estimated population is between 7,000 and 11,000 individuals. The decline in the number and distribution of scrub-jays in east-central Florida has been exacerbated by tremendous urban growth in the past 50 years. Much of the historic commercial and residential development has occurred on the dry soils which previously supported scrub-jay habitat. Much of this area of Florida was settled early because few wetlands restricted urban and agricultural development. Due to the effects of urban and agricultural development over the past 100 years, much of the remaining scrub-jay habitat is now relatively small and isolated. What remains is largely degraded due to the exclusion of fire, which is needed to maintain xeric uplands in conditions suitable for scrub-jays.
