SUPPLEMENTARY INFORMATION:

I. Abstract

Section 10(j) of the Endangered Species Act of 1973 (ESA), as amended, (16 U.S.C. 1531 et seq.) authorizes the Secretary of the Interior to establish experimental populations of endangered or threatened species. Because individuals of experimental populations are categorically protected under the ESA, the information we collect is

important for monitoring the success of reintroduction efforts and recovery efforts in general. Information collection requirements for experimental populations of endangered and threatened species are in 50 CFR 17.84. We collect three categories of information:

(1) General take or removal. Relates to human-related mortality including unintentional taking incidental to otherwise lawful activities (e.g., highway mortalities); animal husbandry actions authorized to manage the population (e.g., translocation or providing aid to sick, injured, or orphaned individuals); take in defense of human life; take related to defense of property (if authorized); or take in the form of authorized harassment.

(2) Depredation-related take. Involves take for management purposes where livestock depredation is documented, and may include authorized harassment or authorized lethal take of experimental animals in the act of attacking livestock.

(3) Specimen collection, recovery, or reporting of dead individuals. This information documents incidental or authorized scientific collection. Most of the contacts with the public deal primarily with the reporting of sightings of experimental population animals or the inadvertent discovery of an injured or dead individual.

The information that we collect includes:

(1) Name, address, and phone number of reporting party.

(2) Species involved.

(3) Type of incident.

(4) Location and time of the reported incident.

(5) Description of the circumstances related to the incident.

This information helps us to assess the effectiveness of control activities and to develop better means to reduce problems with livestock for those species where depredation is a problem. Service recovery specialists use the information to determine the success of reintroductions in relation to established recovery plan goals for the threatened and endangered species involved.
