Southern Lng Inc.; Elba Express Company, LLC; Southern Natural Gas Company; Notice of Availability of the Final Environmental Impact Statement for the Elba III Project

August 3, 2007.

The staff of the Federal Energy Regulatory Commission (FERC or Commission) in cooperation with the U.S. Army Corps of Engineers (COE); U.S. Coast Guard (Coast Guard); and the National Oceanic and Atmospheric Administration, National Marine Fisheries Service has prepared this final Environmental Impact Statement (EIS) for the Elba III Project. The project is proposed by Southern Natural Gas Company (Southern) and its subsidiaries Southern LNG Inc. (Southern LNG) and Elba Express Company, L.L.C. (EEC). The proposed facilities consist of an expansion of Southern LNG's existing onshore Elba Island Liquefied Natural Gas (LNG) Import Terminal on the Savannah River in Georgia and construction and operation of the Elba Express Pipeline—a natural gas pipeline with compression and other appurtenant facilities in various counties in Georgia and South Carolina.

The final EIS was prepared to satisfy the requirements of the National Environmental Policy Act of 1969 (NEPA). Its purpose is to inform the Commission, the public, and other permitting agencies about the potential adverse and beneficial environmental impacts associated with the proposed project. It also recommends practical, reasonable, and appropriate mitigation measures which would avoid or reduce significant adverse impacts to the maximum extent practicable and, where feasible, to less than significant levels.

In addition to the proposed action, the final EIS evaluates alternatives, including alternative energy sources, system alternatives, alternative sites for the LNG import terminal, alternative designs, pipeline alternatives, and

alternatives to the Coast Guard Letter of Recommendation (LOR) action. The final EIS concludes that the Elba III Project is unlikely to result in significant adverse environmental impact on particular resources within the Zones of Concern because it is unlikely that a substantial cargo release would occur. In addition, if the project is constructed and operated in accordance with applicable laws and regulations, Southern LNG and EEC's proposed mitigation, and the additional mitigation recommendations (see section 5), it would be an environmentally acceptable action.

Proposed Facilities—Elba Terminal Expansion

Southern LNG plans to construct and operate an expansion of its existing LNG import terminal on Elba Island near Savannah, in Chatham County, Georgia. The expansion would: (a) More than double the terminal's LNG storage capacity by adding 405,000 cubic meters (m³) of new storage; (b) substantially increase the facility's existing vaporization capacity; (c) upgrade the terminal's send-out meter station capacity by an additional 900 million cubic feet per day (MMcfd); and (d) modify the terminal's LNG tanker berthing and unloading facilities to accommodate larger tankers and provide simultaneous unloading of two LNG tankers. Terminal expansion would entail an increase in the frequency (and potentially the size) of LNG vessels using the Savannah River transit route. All of the planned facilities would be located entirely within the existing 190-acre facility site on Elba Island.

The LNG terminal expansion would be constructed in two phases, A and B. Phase A would be completed as early as January 2010 and would include the following facilities:

a. One new 200,000 m³ (1.25 million barrels) LNG storage tank, one associated boil-off gas condenser, and three boil-off gas compressors;

b. Three submerged combustion vaporizers, each with a peak capacity of 180 MMcfd (providing a total peak send-out capacity of 1,755 MMcfd for the full facility at the completion of phase A); and

c. Modifications to the unloading docks to accommodate new, larger LNG tankers and to allow simultaneous unloading of two LNG tankers. The modifications to the dual berthing slip include:

- Adding four mooring dolphins (two for each berth);
- Dredging approximately 72,000 cubic yards of material from the slope at the back of the existing slip (and
