Endangered Species; File No. 1557-03

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of permit modification.

SUMMARY: Notice is hereby given that Molly Lutcavage has been issued a modification to scientific research Permit No. 1557.

ADDRESSES: The modification and related documents are available for review upon written request or by appointment in the following office: Permits, Conservation and Education Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; phone (301) 713-2289; fax (301) 427-2521.

FOR FURTHER INFORMATION CONTACT: Patrick Opay or Kate Swails, (301) 713-2289.

SUPPLEMENTARY INFORMATION: On May 3, 2007, notice was published in the **Federal Register** (72 FR 24565) that a modification of Permit No. 1557 had been requested by the above-named individual. The requested modification has been granted under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222-226).

The researchers will attach satellite-linked data recorders to the leatherback sea turtle's carapace and feed stomach temperature pills to the animals. These pills will record stomach temperatures

and transmit them to the satellite-linked data recorder for transmission to the researchers. Researchers will also attach diary tags using suction cups. This research will help better understand where, when, and under what environmental conditions leatherback sea turtles forage so as to better predict their movements. This information will be used to help predict leatherback movements and potential interactions with fisheries and other human activities to allow resource managers to design management strategies to protect this species.

Issuance of this modification, as required by the ESA was based on a finding that such permit (1) Was applied for in good faith, (2) will not operate to the disadvantage of such endangered or threatened species, and (3) is consistent with the purposes and policies set forth in section 2 of the ESA.

Dr. Peterson seeks permission to conduct research on shortnose sturgeon for five years to assess the abundance, age structure, distribution, movement, and critical habitat and will also investigate the adverse effects of estrogenic compounds. Researchers propose to capture 300 shortnose sturgeon yearly using gill and trammel nets and to anesthetize, measure, weigh, tissue and fin-ray sample, and scan for PIT tags. A subset of 10 sturgeon annually (40 during permit) would be laparoscoped and implanted with internal radio tags; a subset of 5 sturgeon annually (20 during permit), would be laparoscoped and fitted with external radio tags; and a subset of 12 sturgeon would be health evaluated using laparoscopy and venipuncture annually. Up to 40 shortnose sturgeon eggs would be collected annually using buffer pads to document spawning. The unintentional mortality of 2 shortnose sturgeon annually is also requested.
