**SUPPLEMENTARY INFORMATION:**

**I. Introduction**

The U.S. Nuclear Regulatory  
Commission (NRC) is considering the  
issuance of a license amendment to  
Source Materials License No. STC-133.  
This license is held by Defense Logistics  
Agency (the Licensee). The license  
authorizes the Licensee to use licensed  
material at multiple sites in different  
States. At issue here is the Licensee's  
Defense National Stockpile Center  
Somerville Depot, located at 152 U.S.  
Highway Route, Hillsborough, New  
Jersey (the Facility). Issuance of the  
amendment would authorize release of  
the Facility for unrestricted use, but  
would not involve termination of the  
license. The Licensee requested this  
action in a letter dated January 3, 2007.  
The NRC has prepared an  
Environmental Assessment (EA) in  
support of this proposed action in  
accordance with the requirements of  
Title 10, Code of Federal Regulations  
(CFR), Part 51 (10 CFR Part 51). Based  
on the EA, the NRC has concluded that  
a Finding of No Significant Impact  
(FONSI) is appropriate with respect to  
the proposed action. The amendment  
will be issued to the Licensee following  
the publication of this FONSI and EA in  
the **Federal Register**.

**II. Environmental Assessment**

*Identification of Proposed Action*

The proposed action would approve  
the Licensee's January 3, 2007, license  
amendment request, resulting in release  
of the Facility for unrestricted use in

accordance with 10 CFR 20.1402.  
License No. STC-133 was issued on July  
27, 1983, pursuant to 10 CFR Part 40,  
and has been amended periodically  
since that time. With respect to the  
Facility, the license authorized the  
Licensee to use unsealed source  
material for purposes of storage,  
sampling, repackaging, and transferring  
materials.

The Facility is situated on 77 acres of  
land and consists of warehouses and  
office space. The Facility is located in  
a mixed industrial area. Within the  
Facility, use of licensed materials was  
confined to a decontamination trailer  
and warehouses 1, 3, and 4. The area of  
use totaled approximately 50,000 square  
feet.

On September 16, 2004, the Licensee  
ceased licensed activities at the Facility,  
and initiated a survey and  
decontamination actions there. Based on  
the Licensee's historical knowledge of  
the site and the conditions of the  
Facility, the Licensee determined that  
only routine decontamination activities,  
in accordance with their NRC-approved,  
operating radiation safety procedures,  
were required. The Licensee was not  
required to submit a decommissioning  
plan to the NRC because worker cleanup  
activities and procedures are consistent  
with those approved for routine  
operations. The Licensee conducted  
surveys of the Facility and provided  
information to the NRC to demonstrate  
that it meets the criteria in Subpart E of  
10 CFR Part 20 for unrestricted release.

*Need for the Proposed Action*

The Licensee has ceased conducting  
licensed activities at the Facility, and  
seeks the unrestricted use of its Facility.

*Environmental Impacts of the Proposed  
Action*

The historical review of licensed  
activities conducted at the Facility  
shows that such activities involved use  
of the following radionuclides with half-  
lives greater than 120 days: natural  
uranium and thorium. Prior to  
performing the final status survey, the  
Licensee conducted decontamination  
activities, as necessary, in the areas of  
the Facility affected by these  
radionuclides.

The Licensee elected to demonstrate  
compliance with the radiological  
criteria for unrestricted release as  
specified in 10 CFR 20.1402 by  
developing derived concentration  
guideline levels (DCGLs) for its Facility.  
The Licensee conducted site-specific  
dose modeling using input parameters  
specific to the Facility and a  
conservative assumption that all  
residual radioactivity is in equilibrium.
