The Commission is now setting such a deadline. 1. Describe and compare government policies in the United States and key competitor countries throughout the world relating to the development of products by these industries;
2. Analyze the extent of business activity in these industries, including, but not limited to, trends in production, financial performance, investment, research and development, and impediments to development and trade;
3. Examine factors affecting the development of bio-based products, including liquid biofuels, and renewable chemical platforms being developed by the U.S. chemical industry, including, but not limited to, globalization of supply chains, capital investment sources, strategic alliances, intellectual property rights, and technology transfer mechanisms;
4. Determine, to the extent feasible, how the adoption of industrial biotechnology processing and products impacts the productivity and competitiveness of firms in these industries; and
5. Assess how existing U.S. government programs may affect the production and utilization of agricultural feedstocks for liquid biofuels as well as bio-based products and renewable chemical platforms being developed by the U.S. chemical industry.
