

estimating wind strengths without the use of instruments. For wind speeds that could affect application of residential products, the visual effects according to the Beaufort scale for a moderate breeze of 13 to 18 miles per hour would be that small branches on trees are moving. Is this a practical indicator of when not to use a product? Is the phrase "Do not apply when wind is strong enough to move small branches on trees, as wind will carry spray away from treatment area" preferable to "Do not apply when wind is strong enough to carry spray away from treatment area"?

II. What Action is the Agency Taking?

EPA is recommending that registrants of outdoor residential use pesticides revise Environmental Hazard Statements on product labels. This action is voluntary and may be done through notification. As this is voluntary, no Agency action will be taken.

In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

B. Tips for Preparing Your Comments. When submitting comments, remember to:

- Follow directions—The agency may ask you to respond to specific questions or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.
- Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.
- Describe any assumptions and provide any technical information and/or data that you used.
- If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail for it to be reproduced.
- Provide specific examples to illustrate your concerns, and suggest alternatives.
- Explain your views as clearly as possible, avoiding the use of profanity and personal threats.
