2. EIH and its individual Suppliers may regularly exchange information on a one-on-one basis regarding that Supplier's inventories and near-term production schedules so EIH may determined the availability of Products for export and effectively coordinated with its distributors in Export Markets.

Terms and Conditions of Certificate

- 1. EIH, including its officers, employees or agents, shall not intentionally disclose, directly or indirectly, to any Supplier (including parent companies, subsidiaries, or other entities related to any Supplier) any information about any other Supplier's costs, production, capacity, inventories, domestic prices, domestic sales, terms of domestic marketing or sale, or U.S. business plans, strategies, or methods unless such information is already generally available to the trade or public.
- 2. EIH will comply with requests made by the Secretary of Commerce on behalf of the Secretary or the Attorney General for information or documents relevant to conduct under the Certificate. The Secretary of Commerce will request such information or documents when either the Attorney General or the Secretary believes that the information or documents are required to determine that the Export Trade, Export Trade Activities and Methods of Operation of a person protected by this Certificate of Review continue to comply with the standards of Section 303(a) of the Act.

Definition

"Supplier" means a person who produces, provides, or sells a Product and/or Services.

Protection Provided by Certificate

This Certificate protects EIH and its directors, officers, and employees acting on its behalf from private treble damage actions and government criminal and civil suits under U.S. federal and state antitrust laws for the export conduct specified in the Certificate and carried out during its effective period in compliance with its terms and conditions.

Title: Self-Assembled Monolayer Based Silver Switches.

Abstract: The invention is a two-state switching device based on two electrodes separated by a self-assembled monolayer. At least one of the electrodes may be composed of silver and the other electrode of any electrically conductive material, such as metals, especially gold or platinum. In the high-resistance OFF state, the two electrodes are separated by a nonelectrically conducting organic monolayer. Application of a negative threshold bias causes a silver ion filament to grow within the monolayer and bridge the gap between the two electrodes, changing the device into a low-resistance ON state. The device may be turned OFF by application of a positive threshold bias, which causes the ionic filament to retract back into the silver electrode. The device is easy to fabricate, smaller than currently available devices, and because the only required components are silver, another electrode and a self-assembled monolayer between them, it should be possible to incorporate this switch into a variety of device geometries.
