

Two live and four dead California sea lions have been removed from Edison Canal since 1977. No harbor seals have been entrained by the REMGS CWS since 1977. Based on the information, incidental takes of less than one harbor seal and less than one California sea lion per year are anticipated.

Reliant Energy Ormond Beach Generating Station (OBGS)

OBGS is a two-unit, 1,500-MW gas-fueled, steam-electric generating facility located near the California coast town of Oxnard, southeast of the entrance to Port Hueneme. The plant is approximately 48 km south of Santa Barbara, and 97 km north of Los Angeles. The plant is owned by Reliant Energy and is currently being operated by Southern California Edison Company personnel. Ocean water for cooling purposes is supplied via a single cooling water system. The facility consists of two gas-fueled steam-electric units fed with cooling water via the CWS. Four circulating water pumps operate with a total capacity of 476,000 gpm.

Based on previous take information between 1991 and 2006, it is estimated that on average, less than one harbor seal and approximately one California sea lion could be taken lethally, and less than one harbor seal and sea lion could be taken alive per year. One dead northern elephant seal was entrained in 1998.

Diablo Canyon Power Plant (DCPP)

DCPP is owned and operated by Pacific Gas and Electric Company (PG&E), and is a nuclear-powered, steam-turbine power plant with a rated output of 2,200 MW of electricity. Commercial operation of Unit 1 began in May 1985, and Unit 2 in March 1986. DCPP is located on a coastal terrace midway between the communities of Morro Bay and Avila Beach on the central California coast. The local coast is a steep and rugged rocky shoreline that is exposed to heavy wave activity. Except for DCPP, the coast is largely uninhabited and undeveloped along the 16 km between the cities of Morro Bay and Avila Beach. The power plant draws in seawater from a constructed intake cove through a cooling water system to provide cooling for power plant operations. Four circulating water pumps combine to produce a cooling water flow of 1,704,000 gpm.

The California Stranding Network database indicates that two dead California sea lions have been entrained at the DCPP facility between 1982 and 2006. Less than 1 sea lion lethal take per year is expected.

San Onofre Nuclear Generating Station (SONGS)

SONGS is 2,300-MW facility owned in part by Southern California Edison (SCE), San Diego Gas and Electric Company, the City of Anaheim, and the City of Riverside, and is operated by SCE. It is located near the California coastal town of San Clemente, approximately 70 km north of San Diego and 95 km south of Los Angeles. Camp Pendleton U.S. Marine Corps Base adjoins the facility in northern San Diego County. The facility consists of three units, although Unit 1 was taken offline in 1992. Ocean cooling water is drawn into two offshore structures. The combine intake flow is 1,660,000 gpm.

Based on previous take information between 1991 and 2006, it is estimated that on average approximately six harbor seals and fourteen California sea lions could be taken lethally, and approximately eleven seals and five sea lions could be taken alive per year.

Information Solicited

Interested persons may submit information, suggestions, and comments concerning the requests by the aforementioned 13 power stations in central and southern California (see ADDRESSES). All information, suggestions, and comments related to these requests and NMFS' development and implementation of regulations governing the incidental taking of marine mammals by power plant operations in central and southern California will be considered by NMFS, if appropriate, in developing the most effective regulations governing the issuance of letters of authorization.
