**Title:** Requirements and Exemptions for Specific RCRA Wastes (Renewal).

**ICR numbers:** EPA ICR No. 1597.08, OMB Control No. 2050-0145.

**ICR Status:** This ICR is scheduled to expire on February 29, 2008. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR

part 9, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

**Abstract:** This ICR revises and consolidates the burden contained in two existing approved ICRs: "Requirements and Exemptions for Specific RCRA Wastes," ICR number 1597.06 (OMB Control Number 2050-0145), and the "Used Oil Management Standards Recordkeeping and Reporting Requirements," ICR number 1286.07 (OMB Control Number 2050-0124).

In 1995, EPA promulgated regulations in 40 CFR part 273 that govern the collection and management of widely-generated hazardous wastes known as "Universal Wastes." Universal Wastes are wastes that are generated in non-industrial settings by a vast community, and are present in non-hazardous waste management systems. Examples of Universal Wastes include certain batteries, pesticides, mercury-containing lamps and thermostats. The part 273 regulations are designed to separate Universal Waste from the municipal waste stream by encouraging individuals and organizations to collect these wastes and to manage them in an appropriate hazardous waste management system. EPA distinguishes two types of handlers of Universal Wastes: Small quantity handlers of Universal Waste (SQHUW) and large quantity handlers of Universal Waste (LQHUW). SQHUWs do not accumulate more than 5,000 kg of any one category of Universal Waste at one time, while LQHUWs may accumulate quantities at or above this threshold. More stringent requirements are imposed on LQHUWs because of greater potential environmental risks.

In 2001, EPA promulgated regulations in 40 CFR part 266 that provide increased flexibility to facilities managing wastes commonly known as "Mixed Waste." Mixed Waste are low-level mixed waste (LLMW), and naturally occurring and/or accelerator-produced radioactive material (NARM) containing hazardous waste. These wastes are also regulated by the Atomic Energy Act. As long as specified eligibility criteria and conditions are met, LLMW and NARM are exempt from the definition of hazardous waste as defined in Part 261. Although these eligible wastes are exempted from RCRA manifest, transportation, and disposal requirements, they must still comply with the manifest, transportation, and

disposal requirements under the NRC (or NRC-Agreement State) regulations.

And finally, in 1992, EPA finalized management standards for used oils destined for recycling. The Agency codified the used oil management standards in part 279 of 40 CFR. The regulations at 40 CFR part 279 establish, among other things, streamlined procedures for notification, testing, labeling, and recordkeeping. They also establish a flexible self-implementing approach for tracking off-site shipments that allow used oil handlers to use standard business practices (e.g., invoices, bill of lading). In addition, part 279 sets standards for the prevention and cleanup of releases to the environment during storage and transit. EPA believes these requirements will minimize potential mismanagement of used oils, while not discouraging recycling.

**Burden Statement:** The annual public reporting burden for this collection of information is estimated to average 4.9 hours per response. The total public recordkeeping burden for the Universal Waste requirements is estimated to average 0.2 hours per response.

Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

**Respondents/Affected Entities:** Private Sector and State, Local, or Tribal Governments.

**Estimated Number of Respondents:** 123,330.

**Frequency of Response:** Biennially, On Occasion.

**Estimated Total Annual Hour Burden:** 651,135.

**Estimated Total Annual Cost:** \$30,746,047 which includes \$10,004,415 annualized capital and O&M costs and \$20,741,632 annualized labor costs.

**Changes in the Estimates:** There is an increase of 457,901 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR

Burdens, and an increase of \$10,000,415 in annualized capital/start-up and operations and maintenance costs. This increase is due to the consolidation of this ICR with the Used Oil Management Standards Recordkeeping and Reporting Requirements ICR. In addition, the 2005 final rule on Mercury-Containing Equipment also increased the burden for the Universal Waste portion of this ICR.

Dated: February 20, 2008.

#### SUPPLEMENTARY INFORMATION:

**Background:** The Clean Air Scientific Advisory Committee (CASAC) was established under section 109(d)(2) of the Clean Air Act (CAA or Act) (42 U.S.C. 7409) as an independent scientific advisory committee. CASAC provides advice, information and recommendations on the scientific and technical aspects of air quality criteria and national ambient air quality standards (NAAQS) under sections 108 and 109 of the Act. The CASAC is a Federal advisory committee chartered under the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C., App. The Panel will comply with the provisions of FACA and all appropriate SAB Staff Office procedural policies.

Section 109(d)(1) of the CAA requires that the Agency periodically review and revise, as appropriate, the air quality criteria and the NAAQS for the six "criteria" air pollutants, including NO<sub>x</sub> and SO<sub>x</sub>. EPA published the *Integrated Review Plan for the Secondary National Ambient Air Quality Standards for Nitrogen Dioxide and Sulfur Dioxide (Final)* in December 2007. The CASAC Panel provided a consultation on the draft Plan in October 2007: ([http://yosemite.epa.gov/sab/sabproduct.nsf/77B813F50BDD96C1852573A70005BAF3/\\$File/casac-08-003.pdf](http://yosemite.epa.gov/sab/sabproduct.nsf/77B813F50BDD96C1852573A70005BAF3/$File/casac-08-003.pdf)). EPA's Office of Research and Development (ORD) has completed the *Draft Integrated Science Assessment for Oxides of Nitrogen and Sulfur—Environmental Criteria (ISA)* and EPA's Office of Air and Radiation (OAR) will also release a *Scope and Methods Plan for Risk/Exposure Assessment*. The purpose of the April 2-3, 2008 meeting,
