SUPPLEMENTARY INFORMATION: EPA is submitting the draft document titled "Framework for Determining a Mutagenic Mode of Action for Carcinogenicity: Using EPA's 2005 Cancer Guidelines and Supplemental Guidance for Assessing Susceptibility From Early-Life Exposure to Carcinogens" (or Framework) for independent, external peer review. On September 27, 2007, the draft document was announced in the **Federal Register** and made available for a 60-day public comment period (72 FR 54910). On November 16, 2007, the comment period was extended for 30 days (72 FR 64617). Public comments received in the docket will be shared with the external peer review panel for their consideration. The public release of this draft document is solely for the purpose of seeking public comment and peer

review. This draft document does not represent and should not be construed to represent any EPA policy, viewpoint, or determination.

In response to requests from numerous stakeholders following EPA's release of the "Supplemental Guidance for Assessing Susceptibility from Early-Life Exposure to Carcinogens" in 2005, the Risk Assessment Forum has prepared a framework document that expands and clarifies characteristics used to determine a chemical's potential for a mutagenic mode of action (MOA) for carcinogenicity. This determination affects consideration of adjusting cancer potencies via age-dependent adjustment factors when exposures to these carcinogens occur in children.

The Framework is meant to complement EPA's 2005 "Guidelines for Carcinogen Risk Assessment" (Cancer Guidelines) and chemicals of interest must already have a weight-of-evidence determination for carcinogenicity. The Framework does not provide an approach to hazard identification. Rather, it gives information useful to determining whether MOAs by which the chemical causes cancer include mutagenicity as an early key event; "key event" is a term of art described in the MOA framework in the Cancer Guidelines.

EPA Science Advisor.
