Title: NESHAP for Beryllium Rocket Motor Fuel Firing (Renewal)
ICR Numbers: EPA ICR Number 1125.05, OMB Control Number 2060-0394.

ICR Status: This ICR is scheduled to expire on April 30, 2008. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, and displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for this source category were promulgated on April 6, 1973 and amended on November 7, 1985. These standards establish limits for beryllium. The rule requires subject test sites to test ambient air for beryllium during and after firing a rocket motor. Samples are analyzed within 30 days and results are reported to EPA by registered letter by the business day following the determination and calculation. The rule also requires continuous stack sampling of beryllium combustion products during and after firing a rocket motor, and analysis and reporting within 30 days. In addition, other reporting

requirements include notification of anticipated firing date; air quality emissions and ambient air quality and emission test reports. Recordkeeping requirements include air sampling test results, record of emission test results and making these records available to the Agency.

Any owner or operator subject to the provisions of this part shall maintain a file of these measurements, and retain the file for at least two years following the date of such measurements, maintenance reports, and records. All reports are sent to the delegated state or local authority. In the event that there is no such delegated authority, the reports are sent directly to the EPA regional office. This information is being collected to assure compliance with 40 CFR part 61, subpart D, as authorized in section 112 and 114(a) of the Clean Air Act. The required information consists of emissions data and other information that have been determined to be private.

An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number. The OMB Control Number for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15, and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 8 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Beryllium rocket motor fuel firing.

Estimated Number of Respondents: 1.
Frequency of Response: Initially, and on occasion.

Estimated Total Annual Hour Burden: 8.

Estimated Total Annual Cost: \$538.00 which includes \$0 annualized Capital

Startup costs, \$0 annualized Operating and Maintenance (O&M) costs and \$538.00 annualized Labor costs.

Changes in the Estimates: There are no changes in the labor hours or costs in this ICR compared to the previous ICR. This is due to two considerations. First, the regulations have not changed over the past three years and are not anticipated to change over the next three years. Secondly, the growth rate for the industry is very low, negative or non-existent, so there is no significant change in the overall burden.

Since there are no changes in the regulatory requirements and there is no significant industry growth, the labor hours and cost figures in the previous ICR are used in this ICR and there is no change in burden to industry.

Dated: February 19, 2008.

Sara Hisel-McCoy,

Director, Collection Strategies Division.

Title: NSPS for Municipal Waste Combustors (Renewal).

ICR Numbers: EPA ICR Number 1506.11, OMB Control Number 2060-0210.

ICR Status: This ICR is scheduled to expire on April 30, 2008. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, and displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: The New Source Performance Standards (NSPS) for Municipal Waste Combustors apply to municipal waste combustors with unit capacities greater than 225 megagrams per day. Owners or operators of the affected facilities must make one-time-only notifications and reports and must keep records of all facilities subject to NSPS requirements. Owners or operators are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. The pollutants of concern for subpart Ea are metals, municipal waste combustor (MWC) organics, MWC acid gases, and nitrogen oxides. In subpart Eb the additional pollutants of concern are cadmium (Cd), lead (Pb), and mercury (Hg). Subparts Ea and Eb require owners and operators with unit capacity above 225 megagrams per day to notify the agency of intent to construct and initiate operation of a new, modified or reconstructed MWC. The notification must contain supporting information regarding unit design capacity; the calculations used to determine capacity, and estimated startup dates.

Owners and operators must submit semiannual and annual compliance reports. In addition, facilities subject to subpart Eb are required to keep records of the weekly amount of carbon used for activated carbon injection and to calculate the estimated hourly carbon injection rate for hours of operation as a means of determining continuous compliance for Hg. Annual reports of excess emissions are required under subpart Ea, while semiannual reports of
