BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

Report to Congress on Abnormal Occurrences, Fiscal Year 2007; Dissemination of Information

Section 208 of the Energy Reorganization Act of 1974 (Pub. L. 93-438) defines an abnormal occurrence (AO) as an unscheduled incident or event which the U.S. Nuclear Regulatory Commission (NRC) determines to be significant from the standpoint of public health or safety.

The Federal Reports Elimination and Sunset Act of 1995 (Pub. L. 104-68) requires that AOs be reported to Congress annually. During Fiscal Year 2007, eleven events that occurred at facilities licensed or otherwise regulated by the NRC and/or Agreement States were determined to be AOs. The report describes five events at NRC-licensed facilities. The first NRC-licensed event involved radiation exposure to an embryo/fetus. The other four NRC-licensed events were medical events, as defined in Title 10, Part 35, of the Code of Federal Regulations (10 CFR part 35). All five NRC-licensed events occurred at medical institutions. The report also describes six events at Agreement State-licensed facilities. [Agreement States are those States that have entered into formal agreements with the NRC pursuant to Section 274 of the Atomic Energy Act (AEA) to regulate certain quantities of AEA licensed material at facilities located within their borders.] Currently, there are 34 Agreement States. All six events that occurred at Agreement State-licensed facilities were medical events, as defined in 10 CFR Part 35, and occurred at medical institutions. As required by Section 208, the discussion for each event includes the date and place, nature and probable consequences, the cause or causes, and the actions taken to prevent recurrence. Each event is also being described in NUREG-0090, Vol. 30, "Report to Congress on Abnormal Occurrences: Fiscal Year 2007." This report is available electronically at the NRC Web site <http://www.nrc.gov/reading-rm/doc-collections/nuregs/staff/>.

I. For All Licensees

A. Human Exposure to Radiation From Licensed Material

During this reporting period, one event at an NRC-licensed and regulated facility was significant enough to be reported as an abnormal occurrence (AO).

NRC07-01 Human Exposure to Radiation at Washington University Medical Center in St. Louis, Missouri

Date and Place—May 29, 2007, St. Louis, Missouri.

Nature and Probable Consequences—Washington University Medical Center (the licensee) reported that cancer treatment to a 22 year old patient using iodine-131 resulted in a dose to an embryo/fetus. On May 29, 2007, the treatment was conducted at Barnes Jewish Hospital, the affiliated teaching hospital of Washington University School of Medicine, using 4.64 GBq (126 mCi) of iodine-131. Prior to that
